Introduction

This guide gives you a summary of the overall features and advice on installing the Worldpay payment cartridge. There are the details of the various configurations and a final checklist to make sure that you have properly installed and configured the cartridge. To enable all the features within this cartridge use this guide along with the Technical Integration guide.

The Salesforce cartridge offers a comprehensive suite of payment features designed with your integration needs in mind. It features:

- **Quick and easy installation.** Clear, succinct documentation enables developers to be as productive as possible
- **Lowest possible PCI DSS burden.** We will help you reach full compliance with minimum effort
- **Full support whenever you need it.** Our support teams are there for you – 24/7 for emergency payment support and 24/5 for other issues

Features overview

These are the main features of the cartridge:

Payment methods

Cards

Visa, Mastercard, American Express, Maestro, Diners, Discover, JCB, Carte Bancaire, Carte Bleue, Dankort, Laser, Airplus

APMs

PayPal, ACH Pay, Klarna, IDEAL, AliPay, China Union Pay, Giropay, Konbini, Mistercash, P24, Poli, Sepa, Sofort, WeChat Pay

Mobile wallets

Apple Pay from PDP and cart

The cartridge supports Apple Pay for shoppers with Apple MAC and iPhones to checkout with an additional payment flow.

The Apple Pay button in PDP (Product Detail Page) and Quick View enables shoppers to checkout with the selected product. A product becomes eligible for Apple Pay checkout in PDP Quick View when all the variant options are selected and are available. For products that do not have variations like size, color, and so on, the Apple Pay button displays when the page loads.

On the Cart and mini cart pages, shoppers can click the Apple Pay button to checkout the entire cart contents. In PDP and Quick View, Apple Pay allows only a single product checkout.

Google Pay

Production testing has not been done for Google Pay 3DS2. The features have been fully tested in a test environment. Google Pay and 3DS1 are not supported directly, only as a fallback from 3DS2. Remember that 3DS2 must be enabled if you want to be PSD2 compliant. If you experience challenges in production, please contact your Relationship Manager or Worldpay support.

Payment pages

- Hosted payment page: Redirection to the PCI-compliant payment page that Worldpay hosts
- Direct payment: Direct credit card payment without redirection to a hosted payment page. This uses client-side encryption to encrypt all card details

Payments through call center

Using Worldpay's MOTO feature, your customer service team can make mail orders and telephone orders using the Create Order interface in SFCC

KLARNA

Klarna is a buy now, pay later payment method that provides a fast checkout process. There are three different product types, which define when and how your shopper pays:

- Klarna Pay Now: The shopper pays the full amount immediately by bank transfer
- Klarna Pay Later: The shopper pays within a specified timeframe. This timeframe is 30 days for UK/US and 14 days for Europe
- Klarna Slice It: The shopper pays in instalments. The terms of the instalment timeframes are agreed with Klarna during boarding

NOTE: KLARNA payment methods are under "Beta Release" and Worldpay strongly recommends that you connect with your Worldpay contact before implementation/testing is begun. This will allow Worldpay to provide appropriate support during the integration to ensure everything works as desired.

3DS and 3DS Flex

3DS Flex is the most advanced 3DS product on the market. It provides additional security to your transactions. It combines the new standard of 3DS2 with traditional 3DS which allows for a single integration. 3DS and 3DS Flex support both direct credit card integration and hosted payment pages.

Exemption engine

Request real-time risk analysis of transactions to exempt as many shoppers as possible from strong customer authentication.

Account on file

Tokenization: Tokens are created to send authorization requests with stored card details. This process is PCI compliant. There are two types of token; one is the shopper token and other is the merchant token.

- Choose shopper tokens if you only want to use tokens for your eCommerce channel
- Choose merchant tokens if you want to share tokens between our eCommerce and your Point of Sale (POS) channels (with Worldpay Total as your omni-channel solution)

Stored credentials

With sophisticated methods to improve authorization rates and ensure compliance, we support stored credentials for credit cards. This feature complies with scheme mandates for storing (and subsequently using) card payment credentials for cardholder and merchant-initiated transactions.

Extended Response Codes

By default, Worldpay uses a set of standard response codes in order notifications. These codes indicate the status of a card payment.

If extended response codes are activated on your merchant code(s), you will receive enriched decline reasons. These enriched decline reasons give more insights into the reason for a transaction not going through.

By leveraging this extra information, you can customize the error messages displayed to your shoppers when their transaction is declined.

Issuer Insights

With over 40 billion transactions processed annually, Worldpay can help to turn your incoming payments into a strategic advantage.

Issuer Insights is a powerful tool that provides a window into issuers' information and performance. You can use this knowledge to identify trends and patterns specific to customers, and ultimately boost your approval rates.

FraudSight

FraudSight is a multi-layered fraud product that combines data insights, technology and a team of experts to predict fraudulent transactions.

It uses machine learning to exploit vast anonymous transactional insights to produce a fraud risk score in real-time.

From this score, applications can automatically accept or decline a transaction. You can manually review questionable transactions for further evaluation.

Statement narratives

The feature enables statement narratives for all the supported APM's (like Google Pay, PayPal, SEPA, Klarna, IDEAL ACH Pay etc.) except for the credit card payment method.

The statement narrative is a text. Shoppers can use it enter the purpose of the transaction in the payment details section. This text is included in the authorization request as part of the payload

LATAM payments

The cartridge supports payments from the following Latin American countries

- Argentina
- Bolivia
- Brazil
- Central America (Costa Rica, Nicaragua, El Salvador, Honduras, Panama, Guatemala)

- Chile
- Colombia
- Ecuador
- Mexico
- Peru
- Uruguay

Prerequisite: You must have a legal entity in each Latin American country that you want to trade in.

CSC: full, multiple capture and partial capture

The cartridge supports full, partial and multiple capture/refund transactions from CSC. See the Sales Force Technical Guide for more details.

Multi merchant support

The multi merchant support feature enables you to use different Worldpay merchant code(s) across several sites or across different channels or across different payment methods. Only one of the methods, either by site or by channel or by payment method is supported at a time.

By site

You can configure different Worldpay merchant codes for each site in the Business Manager instance.

By channel

You can configure different Worldpay merchant codes per channel: e.g. MYBUSINESSECOM for “desktop” and MYBUSINESSMOBILE for “mobile”.

Orders placed using the “desktop” channel are associated with one merchant ID (in the example MYBUSINESSECOM) and orders placed using the “mobile” channel are associated with another merchant ID (in the example MYBUSINESSMOBILE).

The following channels are supported:

- Desktop
- Mobile
- iPad
- CSC (Customer Service Centre)
- Default: The merchant ID you configure here is the default ID if the shopper places an order from some other channel: e.g. a tablet

By payment method

You can configure different merchant codes by payment method.

For example, you could configure the merchant code MERCHANTCODEECOM1 for credit card and the merchant code MERCHANTCODEECOM2 for Google Pay.

Once this configuration is done, orders placed by credit card are associated with one merchant code

(MERCHANTCODEECOM1). Orders placed through Google Pay are associated with the other merchant code (MERCHANTCODEECOM2).

Chrome payment

The cartridge supports Payment Request API.

The Payment Request API allows you, the merchant, to easily collect payment information with minimal integration.

The API is an open and cross-browser standard that replaces traditional checkout flows. It allows you to request and accept any payment in a single API call.

The API eliminates manual and tedious data entry by storing the shopper's information securely in the Google Chrome browser.

The browser passes addresses and credit card (or other payment) details directly to the website. In addition, the shopper journey is much reduced. This is because the browser stores payment information about the shopper, making a payment go from n taps to one tap

One-click payment (quick checkout)

The cartridge supports both the quick checkout or the One Click payment features.

One-Click payment is a feature that enables registered shoppers to place orders quickly without having to go through the payment, billing and shipping forms. Once enabled, all the details needed to place an order are available in a single popup, which creates a trouble-free experience and boosts the conversion rate.

Country spoofing

This is a useful feature for taking international payments.

For example, imagine a specific territory such as the Isle of Man is a billing country not supported by Worldpay. In this situation only default payment methods are accepted such as credit cards and debit cards. The currency of the Isle of Man is the Pound Sterling, the same as the UK. Country Spoofing enables you to include the Isle of Man with the UK. Once done, UK supported APMs appear to Isle of Man shoppers. Both the UK and the Isle of Man use the same currency, so order placement and payment processing are straightforward.

Configurable labels and alerts

This feature gives you the flexibility to configure the values for labels and alerts in Business Manager (BM). This works if you EnableConfigurableLabels in custom preferences, then labels and alerts will pick value from BM.

Once you have enabled configurable labels and alerts in custom preferences you can configure labels and alerts through the custom object (ConfiguredLabels). Every entry in this custom object is a key value pair as it is present in the resource bundle.

The default value, that is, the value from resource bundle (properties file in codebase), is picked under the following conditions:

- If EnableConfigurableLabels in custom preferences is not enabled.
- If you have not added the key value pair in custom object.

- The key is present in our custom object, but the value is empty.

Checkout theme (optional cartridge)

The optional cartridge worldpay_sfra_changes aims to provide an enhanced shopper experience in the payment page of the checkout journey.

You can leverage this new cartridge and provide an enriched UI experience to the shoppers. Import it in Business Manager like any other cartridge.

The key differentiator is the classification of available payment methods into three “buckets” (categories):

- Pay by Credit card: Shopper selects this method when they want to use a credit card to pay
- Pay by Wallet: Shopper selects this method when they want to use e-wallets like GooglePay or Apple Pay to pay
- Pay by Alternative Payment: Shopper selects this method when they want to pay with multiple alternative payment options based on selected country

Compatibility

This cartridge is compatible with SFRA version v6.0.0.

Before you start

Prerequisites

You need to have installed and correctly set up your Salesforce store. If you have any problems with your Salesforce set-up, please visit the [Salesforce support centre](#).

If you haven't already done so, you must contact Worldpay for the account details you'll need for implementation. Check that your Implementation Manager or support contact has given you:

- A merchant code (or codes)
- A Merchant Administration Interface username and password

Make sure you have installed and correctly set up your SFRA site in Business Manager. Use your GitHub credentials to download SFRA and see the [Salesforce B2C Commerce guide](#) for more details.

Access the system

Once you have the system setup and your credentials to login to the [Merchant Administration Interface](#), follow these steps to configure your XML connection credentials:

1. Log in to the test [Merchant Administration Interface](#).
2. Click **ACCOUNT**, then select **Profile** from the top menu.
3. Make a note of your new username for the connection.
4. Click the pencil icon next to XML Password.
5. Enter your new password, click **Save XML Password** and you are ready to begin installation.
6. If you need any help, see the [Merchant Administration Interface user guide](#).

Install the Salesforce cartridge

Add the cartridge in the Salesforce Commerce Cloud Studio

Do the following:

1. In the *int_worldpay_sfra* folder, find the cartridge subfolder.
2. Open *package.json*.
3. Ensure the base path is correctly resolved to *app_storefront_base*, as shown below.

```
"paths": {  
  
  "base": ".../storefront-reference-  
architecture/cartridges/app_storefront_base/"  
  
}
```

4. Check that node.js 8.9.4 or above is installed
5. Open the command prompt and run `npm install`.
6. Run `npm run compile:js` followed by `npm run compile:scss`.
7. Create the *dw.json* file in the same location where you downloaded the source code for the cartridge, as shown below:

```
{  
  
  "hostname": "your-sandbox-hostname.demandware.net",  
  
  "username": "your login",  
  
  "password": "your pwd",  
  
  "code-version": "version_to_upload_to"  
  
}
```

Activate the cartridge in Business Manager

To make the Worldpay functionality available to the reference architecture, you must add a cartridge to the cartridge path of the site in question. Do the following:

1. Log in to Business Manager.
2. Go to *Administration/Sites/Manage Sites*.
3. Click on the site name. The default tab is *General*. Go to the *Settings* tab.
4. In the Cartridges text box add:
`int_worldpay_sfra:int_worldpay_core:int_worldpay_csc:app_storefront_base`

5. Click **Apply**.

6. Repeat steps 3 to 6 for each site that will use Worldpay.

7. To run the job in the Worldpay cartridge, go to *Administration/Sites/Manage Sites*.

8. Go to *Manage the Business Manager* site.

9. In the Cartridges text field, enter:

12

Configurations

Importing metadata with a single site import

All the import files are in the import folder (metadata) in the cartridge installation pack.

NOTE: The cartridge pack is the location where you have downloaded the source code from GitHub. The relative path looks like:

```
salesforce-commerce-cloud-master/metadata
```

To import all the necessary Worldpay settings:

1. Open the metadata folder from the repository structure `open jobs.xml`.
2. Change the references in *RefArch* to your site ID
3. Ensure that the content assets in the import have the appropriate library ID of the site where the XML is imported. To do this in Business Manager:
 - a. Go to *Merchant Tools > Content > Libraries*
 - b. Check the library ID assignment to your site (in the screenshot, for *RefArch*, the library assignment is *RefArchSharedLibrary*):

ID	Type	Site Assignments	Salesforce CMS Channel Assignment	Folders	Content Assets	Status
Library - MobileFirst	Private			1	0	Online
Library - MobileFirstGlobal	Private			1	0	Online
Library - SiteGenesis	Private			1	1	Online
Library - SiteGenesisGlobal	Private			1	0	Online
MobileFirstSharedLibrary	Shared	MobileFirst MobileFirstGlobal		28	110	Online
RefArchSharedLibrary	Shared			1	4	Online
SiteGenesisSharedLibrary	Shared	SiteGenesis SiteGenesisGlobal		28	105	Online

4. Open the metadata folder from the repository structure open sites, then change the folder name *RefArch* according to the site ID to which your site is assigned.
5. Open the metadata folder from the repository structure open libraries, then change the folder name according to the library ID to which your site is assigned. In Business Manager, for *RefArch* the assigned library is *RefArchSharedLibrary*. Open the *library.xml* and change the reference of *RefArchSharedLibrary* according to your site assignment.
6. Zip the metadata folder in the repository structure.
7. Log in to Business Manager and go to *Administration/Site Development/Site Import & Export*.
8. Click the **Upload** button to upload the zipped metadata folder.
9. Select the uploaded file and click the **Import** button After a successful import, all the cartridge configurations are available to you, according to your Worldpay account data.

NOTE: The site preferences are re-organized into different groups for better usability. If you migrate to this new cartridge from an existing older cartridge a problem may occur. After the migration, you may see duplicate site preferences under the Worldpay group. To avoid confusion, make sure you disassociate the duplicate site references from the older site preferences group.

10. Verify the order-level attributes in Business Manager. To do this go to *Site/Ordering/Order*. Open any order and go to the *Attributes* tab. It should be similar to the screenshot below:

Attributes for Order 'D00113427'

On this page you can edit the attributes of the order. Fields with a red asterisk (*) are mandatory. Click **Apply** to save changes. Click **Reset** to revert your changes.

Provide your IP address

You must provide the outgoing IP address of your client in order to whitelist your IP. If you do not provide the outgoing IP address, some payment attempts are marked as fraudulent. To provide the outgoing IP address of your client:

1. Go to *Site/Merchant Tool/Site Preferences/Custom Preferences*, a custom site preference group appears: *Worldpay-General*

Worldpay Notification IP Addresses End*

(WorldpayNotificationIPAddressesEn...
(String)

195360000

Worldpay Notification IP Addresses Start*

(WorldpayNotificationIPAddressesSt...
(String)

195359000

Managing custom site preferences

To manage your custom site preferences, do the following:

1. In Business Manager, go to *Site/Merchant Tool/Site Preferences/Custom Preferences*, where you will see many custom site preference groups.
2. Click the preference group with the Worldpay-PaymentScreen ID.

Name	Value	Default Value	
Worldpay Redirect Success URL (WorldpayRedirectSuccessURL) (String)	COPlaceOrder-Submit	COPlaceOrder-Submit	Edit Across Sites
Worldpay Redirect Failure URL (WorldpayRedirectFailureURL) (String)	COPlaceOrder-Submit	COPlaceOrder-Submit	Edit Across Sites
Worldpay Redirect Pending URL (WorldpayRedirectPendingURL) (String)	COPlaceOrder-Submit	COPlaceOrder-Submit	Edit Across Sites
Worldpay Redirect Cancel URL (WorldpayRedirectCancelURL) (String)	COPlaceOrder-Submit	COPlaceOrder-Submit	Edit Across Sites
Worldpay Address Details Read Only (WorldpayFixContact) Set this value to true if address details needs to be made read only	Yes	Yes	Edit Across Sites
Worldpay Hide Address Details (WorldpayHideContact) Set this value to hide address details on V3 Payment pages	Yes	Yes	Edit Across Sites

3. Edit the attributes according to your Worldpay account data. As well as the attributes supplied by Worldpay, enter the properties in the table with these values:

Site preference	Value
Worldpay Redirect SuccessURL	COPlaceOrder-Submit
Worldpay Redirect PendingURL	COPlaceOrder-Submit
Worldpay Redirect FailureURL	COPlaceOrder-Submit
Worldpay Redirect CancelURL	COPlaceOrder-Submit

4. Click the Worldpay-SecureTransaction and add the attribute as given below.

Name	Value	Default Value	
Worldpay TermURL (WorldpayTermURL) (String)	Worldpay-HandleAuthenticationResponse	Worldpay-HandleAuthenticationResponse	Edit Across Sites

Site preference	Value
Worldpay TermURL	<i>Worldpay-HandleAuthenticationResponse</i>

These properties handle the different redirection scenarios for hosted payment pages or APMS. You should input the value of controllers for each redirection scenario: success, failure, pending, and so on. The controller returns the respective function. The *Worldpay TermURL* handles the 3DS authentication response.

The Core configuration table in the section below contains the complete list of custom preferences.

Configuration tables and screens

This section shows each area of configuration within the plugin, with details of what can be customized and what is set as default. If you want to enable a feature or configuration, see the Technical Integration guide for the information you want.

Core configuration table

To access these preferences, go to *Site/Merchant Tool/Site Preferences/Custom Preferences/ Worldpay-Core*.

* = Mandatory field.

Site preference	Description	Default values
Merchant Code for Worldpay*	Your merchant code, which your Worldpay implementation manager supplies and you can access in the Merchant Administration Interface .	Your merchant code from Worldpay.
Worldpay MAC Secret Code*	Your MAC secret code, which is configurable in the Merchant Administration Interface .	Your MAC secret code from Worldpay.
Enable Client-Side Encryption	If set to True , client-side encryption is enabled. Client-side encryption encrypts all credit card details in the request payload to enhance data security.	Default value: False.
Worldpay Client-Side Encryption Public Key	The public key Worldpay provides, used to calculate the MAC value of an order.	Worldpay provides this.
Worldpay Installation id	The installation ID Worldpay provides. It determines the look and feel of hosted payment pages.	Worldpay provides this.
Controller*	The name of the controller cartridge.	You set this preference.
Core Name	The name of the core cartridge.	You set this preference.

To access these preferences, go to *Site/Merchant Tool/Site Preferences/Custom Preferences/ Worldpay-General*

* = Mandatory field.

Site preference	Description	Default values
EnableJobMailerService	Use this field to switch the email service on or off. The emails are triggered if the cartridge logic fails to handle the order notification or enquiry. Or, if it fails to update its status in the order transaction field.	You set this preference.
NotifyJobMailCC	The email address to be kept in CC for receiving the order notify job status update.	You set this preference. You can add multiple addresses separated by semicolons.
NotifyJobMailFrom	The email address that shows the recipients of job status notifications where the email was sent from.	You set this preference. You can add multiple addresses separated by semicolons.
NotifyJobMailTo	The email address to be added as To for receiving the notify job status update.	You set this preference. You can add multiple addresses separated by semicolons.
Worldpay Order Inquiry Lag Time	The time interval (in minutes) for selecting failed orders to be refunded	Default value: 15

	or cancelled by the Initiate Cancel Order job.	
Worldpay Notification IP Addresses End*	The last Worldpay IP address in the range that sends notifications.	Worldpay provides this.
Worldpay Notification IP Addresses Start*	The first Worldpay IP address in the range that sends notifications.	Worldpay provides this.
Worldpay Validate IP Address	If set to True , you validate the IP addresses that send notifications.	Default value: False
CaptureServiceTrackingID	If set to True , you validate the order ID and token. On matching, the payment has a tracking ID when the capture service starts.	Default value: False

Verify your payment processors

After you have uploaded the metadata, all your payment-processor details are updated automatically. You must now verify these payment processors. To do this:

1. In Business Manager, select the site you want to configure from the dropdown and go to *Merchant Tools/Ordering/Payment Processors*.
2. Check that the *Worldpay* processor is listed. See the screenshots below:

Merchant Tools > Ordering > Payment Processors

Payment Processors

The list shows all payment processors currently defined for this site. Click **New** to create a custom payment processor. Use the checkboxes and then click **Delete** to delete payment processors. Note that standard system payment processors can't be deleted.

Select All	Processor ID	Description
<input type="checkbox"/>	BASIC_CREDIT	Internal credit card handling with simple card number check only.
<input type="checkbox"/>	BASIC_GIFT_CERTIFICATE	Internal gift certificate handling.
<input type="checkbox"/>	CYBERSOURCE_BML	'Bill Me Later' online authorization through Cybersource (test and production systems).
<input type="checkbox"/>	CYBERSOURCE_CREDIT	Cybersource online credit card authorization (test and production systems).
<input type="checkbox"/>	PAYPAL_CREDIT	Paypal online credit card authorization (test and production systems).
<input type="checkbox"/>	PAYPAL_EXPRESS	Paypal Express Checkout (test and production systems).
<input type="checkbox"/>	VERISIGN_CREDIT	Verisign online credit card authorization (test and production systems).
<input type="checkbox"/>	Worldpay	Worldpay Payment Processor

Payment methods

In the integration package, a payment-method definition is provided in the file *payment-methods.xml* within the metadata folder that you have already imported.

To enable the payment methods:

1. Go to Merchant *Tools/Ordering/Payment Methods* and enable the payment methods as required.

CHINAUNIONPAY-SSL Details

2. To set the custom attributes of a payment method, scroll down to the **Custom** field, as show below.

Worldpay Credit Card - Redirect Yes 23

Worldpay Details

Custom

Merchant Code:

User Name:

Type*: REDIRECT (Redirect) [Edit](#)

Password: Confirm:

Days after which Order expires:

SEPA Mandate Number:

Worldpay Statement Narrative:

HPP CustomOptions JSON:

[Apply](#) [Cancel](#)

You can set the following custom attributes (see table below):

* = Mandatory field.

Custom attribute	Description
Merchant code	Your Worldpay merchant code.
User Name	Your Worldpay username.
Type	Select whether the integration type for this method should be <i>Direct</i> (for direct credit card integration) or <i>Redirect</i> (hosted payment page).
Password*	Your Worldpay merchant XML password.
Days after which order expires	State the number of days after which the order status changes to failed.
SEPA mandate number	The SEPA mandate number that Worldpay provides.
Worldpay Statement Narrative	The shopper sees this text as a dynamic descriptor on certain APM payment pages (after opening Order Details).
HPP CustomOptions JSON	Populate this only if the payment method is defined as credit card redirect. In this case, you define the JSON that determines the type of iframe/lightbox in which the hosted payment page appears. The default value is blank; this means that the Worldpay redirection page appears.

How to enable and manage credit cards

To enable and manage card details, do the following:

1. Go to *Payment Method/Credit/Debit Cards*.

The screenshot shows the 'Manage Credit/Debit Cards' window. At the top, there's a 'New' button and a language dropdown set to 'Default'. Below is a table with columns 'Type', 'Name', and 'Enabled'. The 'Visa' row is selected. Underneath, the 'Visa Details' section contains several input fields: 'py6' to 'to', 'kr' to 'to', 'S\$' to 'to', '\$' to 'to', 'Security Code Length' (set to 3 characters), 'Card Number Verification' (set to 4), 'Card Number Length' (set to 13,16), 'Checksum Verification' (set to Yes), and 'Worldpay Card Type' (set to VISA-SSL). The 'Worldpay Card Type' field is highlighted with a green box.

Use this screen to enable the various credit and debit cards that you want.

NOTE: Ensure that the *Worldpay Card Type* field, at the bottom of the screen above, is populated. For example, for VISA it is *VISA-SSL*. You must do this for all the cards you want to support on your site.

All the card-detail fields on this screen are optional:

Card attribute	Description
Security Code Length	The maximum length of security code for each card type.
Card Number Verification	The card verification numbers: For example: 622126-622925 (range) or 5018, 5020, 5038 (individual values).
Card Number Length	The maximum length of card number (the range is 13-16) for each type of card.
Checksum Verification	Will the system do a checksum verification? Yes or No.
Worldpay Card Type	The Worldpay card type. For example, for VISA it is "VISA-SSL". See Appendix A: payment mapping tables for all the mapping information.

Managing jobs

A job definition is provided in *jobs.xml*.

Below is a list of the jobs associated with the cartridge. Please read the Salesforce Technical guide for more details about each job.

Jobs	Description
DeleteCard	Deletes all saved credit cards that have empty tokens.
InitiateCancelOrderJobs	Cancels or refunds all failed orders that have the <i>MAC Missing</i> attribute.
OrderCleanUpJob	Deletes all orders in the <i>CREATED</i> state. The orders for deletion are identified based on the number of days specified at the order level.
OrderInquiriesUpdateJob	Updates the statuses (Order Status/Payment Status/Confirmation Status) of all orders that have <i>CREATED</i> , <i>NEW AND OPEN</i> statuses and that also have a <i>NOT PAID</i> payment status.
OrderNotificationUpdatesJob	Picks the details stored in custom objects as part of the order notification flow from Worldpay. The job sorts the details in order of creation time. The job then reads the custom objects one by one and updates their statuses (<i>Order Status/Payment Status/Confirmation Status</i>) in Business Manager.

Associate jobs with sites

Make sure you associate jobs with each of your sites. To do this:

1. In Business Manager, go to *Administration/Operations/Jobs*. All the jobs including the one present in out of the box (OOTB) are listed here. The table above lists the jobs that are part of the Worldpay cartridge.

ID	Status	Last Run	Execution Scope	Resources	Priority	Enabled	Delete
DeleteCard	-		MobileFirst	-			
DownloadFiles	-		MobileFirst	-			
InitiateCancelOrderJobs	-		MobileFirst	-			
NotifyFraudSightOrdersJob	OK	9/8/2021 3:48:01 am	2	-			
Order Export WorldPay	-		MobileFirst	-			
OrderCleanUpJob	-		MobileFirst	-			
OrderExportJob	-		Organization	-			
OrderInquiriesUpdateJob	-		MobileFirst	-			
OrderNotificationUpdatesJob	OK	9/8/2021 3:47:26 am	2	-			
RebuildURLs	-		2	-			
Reindex	-		2	-			
UploadFiles	-		MobileFirst	-			

On the screenshot above you can see all the jobs listed. You can see if the jobs are enabled, the last run time, status of the last run, priority and execution scope. You can also use this screen to delete a job. All the jobs are enabled by default.

Go to individual jobs to enable or disable them, change their schedules, etc. You can find more details about jobs in the Salesforce Technical guide.

Appendix A: payment mapping tables

Payment method	Key value
Alipay	ALIPAY-SSL
Alipay Mobile	ALIPAYMOBILE-SSL
Apple Pay	DW_APPLE_PAY
Credit card (direct)	CREDIT_CARD
Credit card (redirect)	Worldpay
China Union Pay	CHINAUNIONPAY-SSL
Giropay	GIROPAY-SSL
Google Pay	PAYWITHGOOGLE-SSL
IDEAL	IDEAL-SSL
Konbini	KONBINI-SSL
Mister Cash	MISTERCASH-SSL
Paypal	PAYPAL-EXPRESS
Poli	POLI-SSL
Przelewy	PRZELEWY-SSL
SEPA	SEPA-SSL
SEPA DD	SEPA_DIRECT_DEBIT-SSL
Sofort	SOFORT-SSL
Sofort Switzerland	SOFORT_CH-SSL
WeChat Pay	WECHATPAY-SSL

Appendix B: disabling and enabling the Worldpay integration

To disable the Worldpay integration:

1. Go to *Merchant Tools/Ordering/Payment Methods*.
2. Disable all Worldpay-specific payment methods.
3. Cross-check one by one for the type of processor that the payment method uses. To do this cross-check:
 - a. Click a payment method (for example, *CREDIT_CARD*) and check the payment processor. If it is Worldpay, change it to another processor: For example, for *CREDIT_CARD*, change it to *BASIC_CREDIT*.
4. Enable the payment methods you want to use with each type of processor.
5. Go to *Merchant Tools/Site Preferences/Custom Preferences/Worldpay* and disable the *Enable APM lookup service*.

To enable Worldpay again:

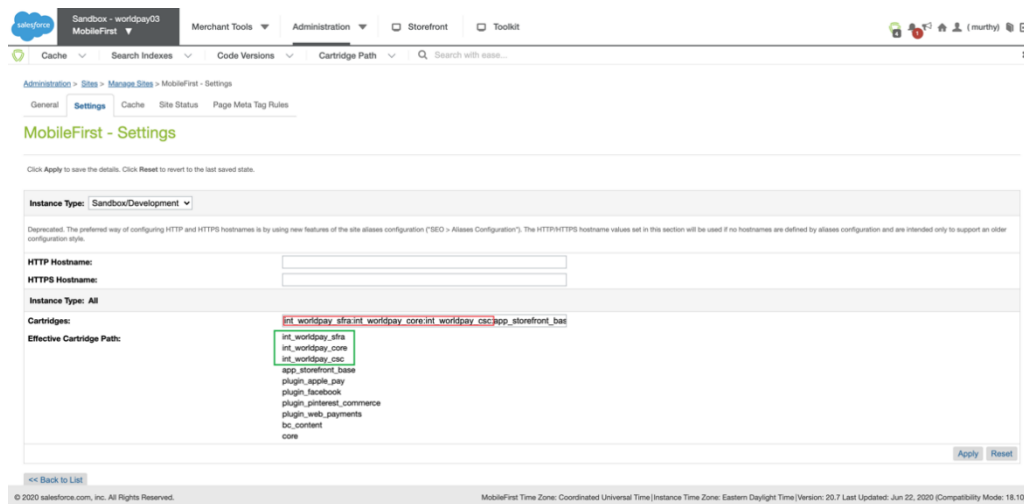

1. Change the processor types back to Worldpay.
2. Go to Merchant Tools/Site Preferences/Custom Preferences/Worldpay and select *Enable APM lookup service*.

Appendix C: integration checklist

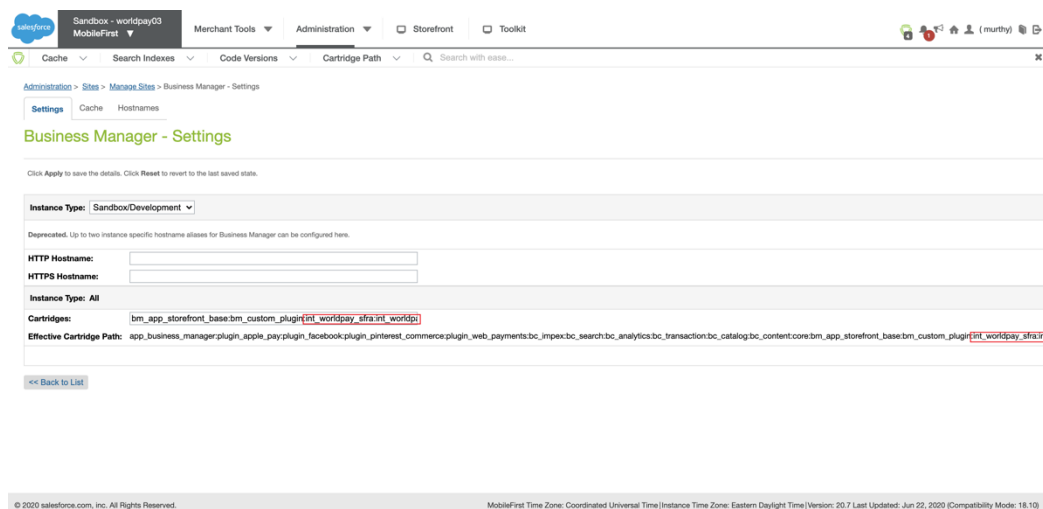

Use this section to check that all Business Manager configurations are in place and you're ready to handle transactions.

Ensure the cartridge paths are correct

1. Go to *Administration/Sites/Manage Sites/[Your site] Settings*:

2. Go to *Administration/Sites/Manage Sites/Business Manager – Settings* and check that the system has added your Worldpay cartridges, as in the screenshot below:

Check that the payment processor with Worldpay ID is available

1. Go to *Merchant Tools/Ordering/Payment Processors*. The Worldpay ID should be visible as in the screenshot below:

The screenshot shows the Salesforce Merchant Tools interface. The breadcrumb trail is *Merchant Tools > Ordering > Payment Processors*. The page title is **Payment Processors**. A note states: "The list shows all payment processors currently defined for this site. Click New to create a custom payment processor. Use the checkboxes and then click Delete to delete payment processors. Note that standard system payment processors can't be deleted." Below this is a table of payment processors:

Select All	Processor ID	Description
<input type="checkbox"/>	BASIC_CREDIT	Internal credit card handling with simple card number check only.
<input type="checkbox"/>	BASIC_GIFT_CERTIFICATE	Internal gift certificate handling.
<input type="checkbox"/>	CYBERSOURCE_BML	'Bill Me Later' online authorization through Cybersource (test and production systems).
<input type="checkbox"/>	CYBERSOURCE_CREDIT	Cybersource online credit card authorization (test and production systems).
<input type="checkbox"/>	PAYPAL_CREDIT	Paypal online credit card authorization (test and production systems).
<input type="checkbox"/>	PAYPAL_EXPRESS	Paypal Express Checkout (test and production systems).
<input type="checkbox"/>	VERISIGN_CREDIT	Verisign online credit card authorization (test and production systems).
<input type="checkbox"/>	Worldpay	Worldpay Payment Processor

Buttons: New, Delete. Showing 1 - 8 of 8 items.

Ensure that payment methods have been enabled and have Worldpay set as their processors

1. Go to *Merchant Tools/Ordering/Payment Methods* and check the availability of payment methods.
2. Open each payment method and verify that the processor is Worldpay, see the screenshot below:

The screenshot shows the Salesforce Merchant Tools interface. The breadcrumb trail is *Merchant Tools > Ordering > Payment Methods*. The page title is **Payment Methods**. A table lists payment methods:

Method ID	Method Name	Available	Count	Action
PRZELEWY-SSL	Przelewy24	Yes	27	✖
QIWI-SSL	QIWI	Yes	18	✖
SEPA_DIRECT_DEBIT-SSL	SEPA	Yes	33	✖
SOFORT-SSL	Sofort	Yes	16	✖
SOFORT_CH-SSL	Sofort	Yes	13	✖
SOLD-SSL	Nordea	Yes	3	✖
WECHATPAY-SSL	Wechatpay	Yes	35	✖
Worldpay	Credit Card - Redirect	Yes	23	✖
YANDEXMONEY-SSL	Yandex	Yes	17	✖

The **WECHATPAY-SSL** method is selected. Its details are shown below:

WECHATPAY-SSL Details

Description:

Image:

Payment Processor:

Countries: All

Currencies: All

Customer Groups: All

Min/Max Payment Ranges:

Buttons: Apply, Cancel.

Check that the Worldpay service is available

1. Go to *Administration /Operations/Services* and see whether the service is available, as in the screenshot below:

2. Go to *Administration /Operations/Services* and see whether the DDC service is available, as in the screenshot below:

Simple checks

Check that content assets have been added

1. Go to *Merchant Tools/Content/Content Assets* and make sure that the content assets with the IDs `worldpayhelper`, `saveCardDisclaimer` and `worldpay-elv-consent` are there.

Check for Sitepreferences group availability

1. Go to *Merchant Tools/Site Preferences/Custom Preferences* and check that the various groups are visible.
2. Open each group to see if the group is available for all custom preferences.

Check that the Worldpay debug is on

1. Go to *Administration/Operations/Custom Log Settings* and verify that the Worldpay debug is on:
