Introduction

The technical guide covers the brief introduction of the product features from Worldpay, how to enable/disable the individual features, customization details available in payment integration cartridge and optional shopper's journey, troubleshooting steps, limitations and any important notes as applicable.

Use this guide together with the *Salesforce Installation and Overview guide*.

Contact Worldpay if you want to add new functionality or payment methods. This is so a Worldpay representative can make any setup or other changes to support the new functions or payment methods.

Please note: According to our policy, it is requisite that you upgrade to the most recent plugins to enable us to provide support for any issues pertaining to plugins.

Functional overview

Payment methods

There are two broad categories of payment method: *XML Direct* and *XML Redirect*, based on the way they are integrated.

XML Direct

If you collect and store shoppers' payment details on your platform, you can use the XML Direct method as an effective payment-processing gateway. With this method you collect both the order and payment details, then send the payment details of each order to Worldpay to process.

You can use Client Side Encryption (CSE) for card payments to reduce the PCI burden (SAQ A-EP), which supports XML Direct. To enable CSE in the cartridge, do the following:

1. In Business Manager, navigate to *Site/Merchant Tool/Site Preferences/Custom Preferences/Worldpay-Core*.
2. Enable Client Side Encryption to Yes
3. Fill in the Client Side Encryption Public Key field with the value as supplied by Worldpay

The screenshot shows the 'Enable Client Side Encryption' configuration screen. It has two main sections: 'Enable Client Side Encryption' (checkbox checked) and 'Worldpay Client Side Encryption Public Key' (text input field containing a long string of characters). There are also dropdown menus for 'Yes' and 'No' and an 'Edit Across Sites' button.

Prerequisites: You are connected to us through a Direct integration and have contacted your Worldpay Relationship Manager to enable Client Side Encryption (CSE).

NOTE: If you process credit cards, the XML Direct model demands more work to meet the higher PCI requirements (SAQ D). For CSE integration you must be PCI DSS compliant to a level of Self-Assessment Questionnaire A-EP or above, in accordance with the latest PCI DSS standards (v3.2.1). Your level of compliance may differ depending on your own unique setup. So, we recommend consulting a QSA to make sure you are set up in the right way to meet your desired PCI DSS level.

The XML Direct model limits online payment methods that do not involve shopper interaction. Because of the high cost of appropriate security measures, XML Direct is only viable if your store has high transaction volumes.

The table below shows the payment methods supported by XML Direct payments:

Payment methods	Region
Credit card, Direct (3D/non-3D)	Global
PayPal	Global
SEPA DD	Austria, Belgium, France, Germany, Ireland, Italy, Netherlands, Spain
Klarna	Austria, Finland, Germany, Netherlands, Norway, Sweden, United Kingdom
SOFORT	Austria, Germany
GiroPay	Germany
iDEAL	Netherlands
Bancontact	Belgium
Przelewy24	Poland
Poli	Australia
Konbini	Japan
Alipay	US, China
MOTO (Mail Order Telephone Order)	Global
Google Pay	Global
Apple Pay	Global
WeChat Pay	WeChat Pay

NOTE: We no longer support payments via Boleto, CashU, eNets, Poli NZ, Qiwi or Yandex.

XML Redirect

XML Redirect is the alternative to XML Direct. With Redirect, you redirect your shoppers to Worldpay's hosted page to collect payment details.

The Redirect method provides real-time processing of payments and offers the maximum number of modern payment methods. Redirect is the fastest and simplest way to get up and running with online payments. Worldpay's hosted payment page service is very secure, and it gives Worldpay the information it needs for active fraud-risk assessment. If you process credit cards, XML Redirect has the lowest payment card industry(PCI SAQ A) requirements.

The table below shows the payment methods supported for XML Redirect payments:

Payment method	Region
Credit Card redirect (3D/non-3D)	Global
China Union Pay (CUP)	US, China
Alipay	US, China
Alipay Mobile	US, China
PayPal	Global
Klarna hosted payment pages	Austria, Finland, Germany, Netherlands, Norway, Sweden, United Kingdom

Limitations and constraints

If you want to integrate the Worldpay cartridge with SFCC Storefront, be aware of these limitations and constraints. We also include some best practice advice, so you get the best from your integration:

- At present you cannot detect session timeouts while the shopper is entering payment details into Worldpay forms. If there is a delay longer than the session timeout, the basket's contents are lost. The order is placed and kept in the Created state
- The placement of the street number in addresses varies between different countries. The cartridge does not have a parsing mechanism for the street number, as this would be very application specific. To avoid errors, set the parsing of street numbers during the integration installation. If you ignore this step the shopper must enter their street number on the Worldpay payment page
- If the Redirect method sends a failure response, the cartridge only has one generic message that appears on the billing page. This is because we do not have any identifier or error code that is returned. The same limitation applies to APMs that send a failure response
- The web service timeout that is set in the service profile is common across all the web service calls made to Worldpay. These service calls include lookup calls, APM order XML calls, authorization calls and so on
- The 'Thank you' page appears in both Successful and Pending open scenarios. So, display a message to the shopper on the 'Thank you' page with a suitable disclaimer that explains both scenarios
- If a transaction fails, the SFCC default shows an error message on the place-order page. To remove this error message, comment/remove the code below from the summary.isml:

```
<div class="error-form">${Resource.msg(pdct.PlaceOrderError.code, 'checkout', null)}</div>
```

- You must validate any additional field that your site can support (e.g., CPF filled for LATAM payments; Swift/bank code for GiroPay). If you use the Direct method for credit cards, automatically reset the credit card form to prevent errors
- The cartridge updates the order status and export status when it receives Enquiry, Authorized and Captured notifications. If orders have any other status, the cartridge does not take any action
- There is a problem if a shopper changes their card type after they provide card information during a previous shopping visit. To solve the problem, implement the credit-card refresh functionality
- At present, you cannot run client-side encryption for saved credit cards if the card number displayed is masked. This applies even if client-side encryption is turned on in your Worldpay account and enabled in the custom preferences for your site
- The shopper sequence number may contain alphanumeric characters and underscores, and it must not exceed 64 characters
- At present, you cannot validate MAC secret identifiers into the response URLs for Redirect APM and Redirect credit card orders
- The notification feature only uses the IP address provided by Worldpay
- You must implement order settlement and refunds
- You must enable/disable the site preference that enables shoppers to submit their CVV for security in the tokenization service for saved cards. Also, you must enable the Worldpay CVV check service for this function to work properly
- Ensure that the SFCC service framework configurations are set up and configured in accordance with your contract with Worldpay that specifies service availability

- You need to enable/disable CVV field validation. The CVV configurations in Business Manager only hide or show the CVV field on the billing page; Worldpay does not undertake any CVV validation
- You can modify the jobs templates according to your needs
- Images of credit-card logos are available in the static folder. You can modify them if you want
- If you implement iframe and lightbox for Airplus or Denkort payments, the payment method appears with the message **Please contact Worldpay**
- Because of code restrictions, you must enable the credit card payment method
- For credit-card Redirect payments, the credit card must be available in the system
- Gift certificates are out of scope
- There are two lint issues in the code related to the @ character

Implementation guide

APMs (alternative payment methods)

The cartridge supports the APMs listed in this section.

The technical guide covers the brief introduction of the product features from Worldpay, and how to enable/disable the individual features. There are also customization details available in payment integration cartridge and optional shopper's journey, troubleshooting steps, limitations and any important notes if applicable.

Use this guide together with the [SalesForce Installation and Overview Guide](#).

Contact Worldpay if you want to add new functionality or payment methods. This is so a Worldpay representative can make any set-up or other changes to support the new functions or payment methods.

See the [APM guide](#) for the full list of APMs that Worldpay supports. The whole functionality can be enabled or disabled in two steps:

1. In Business Manager, navigate to *Site/Merchant Tool/Site Preferences/Custom Preferences/Worldpay-APM*.
2. Enable the *EnableAPMLookUpService* flag.

You must configure the maximum and minimum payment amounts for each APM at the SFCC level in the *Payment Method configuration* section. See the screenshot below.

ID	Name	Enabled	Sort Order
ACH_DIRECT_DEBIT-SSL	ACH Pay	Yes	13

Alipay Mobile

Business Manager configuration

1. Go to *Merchant Tools/Ordering/ Payment Methods*.
2. Verify that the payment method Alipay Mobile, associated with ID ALIPAYMOBILE-SSL, is enabled. See the screenshot below:

Payment Methods

Payment Methods		Language	Default
ID	Name	Enabled	Sort Order
ACH_DIRECT_DEBIT-SSL	ACH Pay	Yes	9
ALIPAY-SSL	Alipay	Yes	13
ALIPAYMOBILE-SSL	Alipay Mobile	Yes	34

Worldpay documentation

Please [read the Alipay documentation](#) for more details.

Enabling iDEAL payments

iDEAL is a payment system for shoppers in the Netherlands. See the [iDEAL guide](#) for a full description of how the system works, and for best integration practices.

In Business Manager there is a preconfigured list of banks. If you want, you can add or remove banks.

To see all the active banks, go to *Administration/Site Development/System Object Definition/SitePreferences*. In the *Attribute Definition* tab, select `WorldpayIdealBankList`.

Object Type 'Site Preferences' - Attribute Value Range Definition

This section lists the attribute value definitions of the attribute. Create a new attribute value definition by providing the "Value" and "Display Value" in the "New Value" section below. Click Apply to update the attribute value definitions. Click Reset to revert your changes. Click Delete to delete selected attribute value definitions.

Search Attribute Value Definitions:		Find		
Select All	Value	Display Value	Default	Sorting
<input type="checkbox"/>	ING	ING	<input type="radio"/>	
<input type="checkbox"/>	ABN_AMRO	ABN AMRO	<input type="radio"/>	
<input type="checkbox"/>	ASN	ASN	<input type="radio"/>	
<input type="checkbox"/>	RABOBANK	Rabobank	<input type="radio"/>	
<input type="checkbox"/>	SNS	SNS	<input type="radio"/>	
<input type="checkbox"/>	SNS_REGIO	SNS Regio	<input type="radio"/>	
<input type="checkbox"/>	TRIODOS	Triodos	<input type="radio"/>	
<input type="checkbox"/>	VAN_LANSCHOT	Van Lanschot	<input type="radio"/>	
<input type="checkbox"/>	KNAB	Knab	<input type="radio"/>	

To manage the bank list:

3. Log in to Business Manager and select the site you want to configure.
4. Go to *Merchant Tools/Site Preferences/Custom Preferences/Worldpay* and select the banks you want to enable in the dropdown, as shown below:

World Pay TermURL

WorldPay-HandleAuthenticationResponse

Worldpay IDEAL Bank List

EnableAPMLookUpService

NOTE: It is important that the list of banks is updated. Ask your Worldpay support contact for the latest list. The Worldpay Implementation Manager should notify the cartridge development team so that the changes are included in the subsequent release.

Klarna

Klarna is a buy now, pay later payment method that provides a fast checkout process.

There are three different product types that define when and how your shopper pays.

Value	Description	Countries available in
KLARNA_SLICEIT-SSL	The shopper pays in instalments. You and Klarna agree the installment timeframes during onboarding.	SE, NO, FI, DE, AT, UK, DK, US

KLARNA_PAYLATER-SSL	The shopper pays within a specified timeframe. This timeframe is 30 days for UK/US and 14 days for Europe.	SE, NO, FI, DE, NL, AT, CH, UK, DK, US
KLARNA_PAYNOW-SSL	The shopper pays the full amount immediately by bank transfer.	SE, DE, NL, AT

NOTE: KLARNA payment methods are under “Beta Release” and Worldpay strongly recommends that you connect with your Worldpay contact before starting implementation and testing. This will allow Worldpay to provide appropriate support during the integration to ensure everything works as desired.

Shoppers can only see the Klarna payment methods that are available in their respective countries. (See the table above.) This is when the shopper’s billing country matches the site locale. See the [Worldpay developer portal documentation](#) for the latest information on the countries available.

Full capture and full refund options in CSC are available for Klarna orders. The customer service agent has to enter one or more tracking IDs separated by “,” in the Capture page.

Business Manager Configuration

To enable different product type features for Klarna APM, do the following:

1. In *Business Manager*, Go to *Merchant Tools > Site Preferences > Custom Site Preference Groups > Worldpay-APM*
2. For the site preference, go to the **Klarna Product Type Values** field and select the applicable product type values.

3. In *Business Manager*, Go to *Merchant Tools > Ordering > Payment Methods*.
4. Verify that the payment methods you selected above (KLARNA_SLICEIT-SSL, KLARNA_PAYLATER-SSL and KLARNA_PAYNOW-SSL) are enabled.

Payment Methods

Name	Enabled	Sort Order
GiroPay-SSL	Yes	28
IDEAL-SSL	Yes	25
KLARNA-SSL	No	27
KLARNA_PAYLATER-SSL	Yes	2
KLARNA_PAYNOW-SSL	Yes	3
KLARNA_SLICEIT-SSL	Yes	1
Kontiki	Yes	31
MisterCash-SSL	Yes	21
MOTO	Yes	11
Wompay-MOTO	No	12

Klarna currency and locale mapping

Klarna uses the following currency and locale mapping:

Country	Currency	Locale	Extra local
United Kingdom	Pound sterling	GB-GB	EN-SB
Austria	Euro	DE-AT	EN-AT

Finland	Euro	FI-FI	EN-FI, SV-FI
Germany	Euro	DE-DE	EN-DE
Netherlands	Euro	NL-NL	EN-NL
Norway	Norwegian krone	NB-NO	EN-NO
Sweden	Swedish krona	SV-SE	EN-SE

NOTE: Ensure that these countries, currencies and locales are correctly configured in Business Manager.

The shopper's experience

The Payment Page with the three options (not available in all countries)

The screenshot shows a payment page with the following layout:

- Payment Method Options:**
 - Row 1: KLARNA SLICE IT, KLARNA PAYLATER, KLARNA PAYNOW
 - Row 2: ACH Pay, PayPal, 支付宝 ALIPAY, UnionPay
 - Row 3: WeChat Pay, Google Pay, Credit Card - Redirect
- Credit Card Input Fields:**
 - A large input field labeled "CREDIT" at the top.
 - *Phone Number: Input field containing 9879879879.
 - *Name on Card: Input field (empty).
 - *Card Number: Input field (empty).
 - *Expiration Month: Input field with dropdown menu showing "month".
 - *Expiration Year: Input field with dropdown menu showing "year".
 - *Security Code: Input field (empty).

Below are screenshots that show the three Klarna options above.

Klarna Slice It

The screenshot shows a payment interface with the following elements:

- A grid of payment method icons and labels:
 - KLARNA PAYLATER
 - KLARNA PAYNOW
 - ACH Pay
 - PayPal
 - 支付宝 ALIPAY
 - UnionPay 银联
 - 微信支付 WeChat Pay
 - CREDIT
 - Google Pay
 - Credit Card - Redirect
- A prominent blue button labeled "KLARNA SLICE IT".
- An input field for a "Phone Number" with the value "9879879879".
- A large blue button at the bottom labeled "Next:Place Order".

Pay By Link / Share Order in Storefront

With this feature user can create an order for which, a payment can be completed at a later time that suits them. It lets a customer make a secure payment using the Worldpay hosted payment page with a preferred payment method. The payment page works across different devices and can be customized with a merchant's name and logo. If shopper fails to complete the payment within the time specified in custom preference, then order will be failed and inventory will be restored. There is also an option to resend link to shopper after expiry time, provided the inventory is still available.

Shopper Experience

Select any of the Payment methods and click the *Pay By Link* button. The link for the payment will be sent by email to the customer and they can make the payment using the link provided in the email (registered email for registered shopper and email id provided in the checkout flow for guest user).

The screenshot shows a storefront interface with the following details:

- Shipping Method:** Ground (7-10 Business Days) - \$0.01
- Payment:** Payment By China Union Pay, Amount \$102.91
- Order Summary:**
 - 2 Items**: \$98.00
 - Sleeveless Pleated Top**: Color: New Coral, Size: M, In Stock. Each \$49.00, Quantity 1, Total \$49.00.
 - Sleeveless Pleated Top**: Color: New Coral, Size: L, In Stock. Each \$49.00, Quantity 1, Total \$49.00.
- Place Order** and **Pay By Link** buttons.
- Footer:**
 - Locate Store: The Store Locator is designed to help you find the closest store near you.
 - Account: My Account, Check Order.
 - Customer Service: Contact Us, Gift Certificates.
 - About: About Us, Privacy.
- Order Confirmation:** Sales Tax: \$2.45, Total: \$51.46. Your order has been created, payment URL is sent to your email.
- Order Details:**
 - 1 Items**: \$49.00
 - Sleeveless Pleated Top**: Color: New Coral, Size: L, In Stock. Each \$49.00, Quantity 1, Total \$49.00.
- Payment Method:** China Union Pay.
- Buttons:** Place Order, Pay By Link.

CSC Pay By Link

Using Worldpay's MOTO feature, your customer service team can make mail orders using the Create Order interface in SFCC. Once the order is created then the link for the payment will be sent through the email to the respected customer and customer can pay the payment by using the link provided in the email. This is the registered email id for registered customer and the customer email id provided in the csc flow entered manually by csc representative for the guest user

Note : CreditCard – redirect is renamed to Pay By Link in CSC.

Shopper Experience:

The screenshot shows the 'NEW ORDER' screen in the Salesforce Commerce Cloud interface. On the right, a sidebar titled 'Add Payment Method' lists 'Pay By Link' and 'Credit Card'. The 'Pay By Link' option is selected. The main panel shows a customer record for 'priyanka.sg@publicissapient.com' with shipping information to 'mysore, United States 95834, Sacramento CA'. A product item 'Striped Silk Tie' is listed with a quantity of 1. Below the product table, there are tabs for 'COUPONS AND SOURCE C...', 'CART DATA', and 'GIFT INFO'. A search bar for 'Enter coupon code' is also present.

The screenshot shows the 'ORDER SUMMARY' page. A green success message at the top states 'Success The order has been placed.' The order details include: Order No.: WQ00060839, Creation Date: 7/12/2022 1:34 pm, Source Code: null, Order Status: NEW, Confirmation Status: NOTCONFIRMED, Export Status: NOTEXPORTED, Shipping Status: NOTSHIPPED, Payment Status: NOTPAID, and Is A Gift: false. The shipping address is the same as the customer record. The payment method is listed as 'WORLDPAY \$ 33.59'. The order summary table shows one item: 'Striped Silk Tie' (Color: Taupe, ID: 793775064963) with a quantity of 1, price of \$29.99, tax of \$1.50, and total of \$29.99. The shipping method is 'Ground' with a cost of \$2.00. The order totals are: ITEMS TOTAL: \$ 29.99, SHIPPING TOTAL: \$ 2.00, TAX TOTAL: \$ 1.60, and ORDER TOTAL: \$ 33.59. At the bottom, there is an 'Add Note' button and a summary table.

APM lookup service

The alternative payment methods (APM) lookup service is a web service that retrieves all the alternative payment methods associated with a country. If the shopper selects or changes a billing address, this web service is invoked.

To find the service in Business Manager, select your site and go to *Merchant Tools/Site Preferences/Custom Preferences / Worldpay-APM*

To enable the service:

1. Select **Yes** in the *EnableAPMLookUpService* site preference dropdown:

Preference setting	Description
When <i>EnableAPMLookUpService</i> is enabled	<ul style="list-style-type: none"> This service works for merchant codes configured in Site Preferences. They return the APMs that are enabled for the merchant code. Displays all active payment methods that have a different merchant code configured in the Payment Method section.
When <i>EnableAPMLookUpService</i> is disabled	All active payment methods are displayed for the merchant ID except credit card, Worldpay and Google Pay.

NOTE: If you support multiple merchant IDs through payment methods, the APM lookup service may not work, so disable it in site preferences.

Prime routing (USA only)

A fully managed, data-driven service that examines each eligible debit transaction and routes it to the appropriate debit network, based on lowest cost. Our intelligent routing platform uses our years of payments experience, and the highest number of debit network connections to give you increased profit margins and lower your costs.

For information on prime routing and advanced prime routing, see the [Prime Routing user guide](#).

To access prime routing, do the following:

1. Go to *Merchant Tools/Site Preferences/Customer Preferences*.
2. Click **Worldpay-US**.
3. Set the *Enable Sales request* field to **Yes** (the default value is No).

Name	Value	Default Value	
Enable Sales request (enableSalesRequest)	<input type="button" value="Yes"/> <input type="button" value="None"/> <input type="button" value="Yes"/> <input checked="" type="button" value="No"/> <input type="button" value="Accept (ACCI)"/> <input type="button" value="AFFN (AFPN)"/> <input type="button" value="CU24 (CU24)"/> <input type="button" value="Jeanie (Jeanie)"/> <input type="button" value="NYSE (NYCE)"/> <input type="button" value="Pulse (Pulse)"/> <input type="button" value="Shazam (Shazam)"/> <input type="button" value="Star SouthEast (Star SouthEast)"/> <input type="button" value="Star West (Star West)"/> <input type="button" value="Star NorthEast (Star NorthEast)"/>	No	Edit Across Sites
debit Networks (debitNetworks)			Edit Across Sites
Routing Preference (routingPreference)	<input type="button" value="signatureOnly (signatureOnly)"/>		Edit Across Sites

Payment methods logo configuration

All the payment methods provided by Worldpay have their own logos are in place by default except KLARNA_PAYLATER, KLARNA_SLICEIT, KLARNA_PAYNOW, KONBINI, POLI.

Payment methods logos are committed to the code base and it is a part of the Cartridge installation process.

Merchant can also update the logos via Business Manager. So, Once the Merchant updated their logos via Business Manager then the Business Manager logos will override the static images which is coming from code base.

Range:

ACH Pay

ACH, or Automated Clearing House, is a payment method that runs on banking networks in the United States.

Business Manager configuration:

1. Go to *Merchant Tools/Ordering/ Payment Methods*.
2. Verify that the payment method *ACH Pay*, associated with the ID *ACH_DIRECT_DEBIT-SSL* is enabled.
See the screenshot below:

Payment Methods

Payment Methods			
ID	Name	Enabled	Sort Order
ACH_DIRECT_DEBIT-SSL	ACH Pay	Yes	9

Voiding ACH pay orders

As ACH pay transactions are captured immediately you may need to void a transaction after its authorization. To do this, use an order modification to void the transaction.

Void the transaction within the same US business day as the sale request, otherwise the process fails. If it does fail, you must submit a refund request.

Void a sale in Business Manager for prime ACH pay orders

NOTE: For configuration and set-up information, see the SFRA installation guide.

To void a transaction (sale) do the following:

1. Go to *Merchant Tools/Ordering/Customer Service Center*.

The screenshot shows the Salesforce Merchant Tools interface. At the top, there's a navigation bar with links for 'Sandbox - worldpay03', 'MobileFirst', 'Merchant Tools', 'Administration', 'Storefront', and 'Toolkit'. Below the navigation is a search bar with placeholder text 'Merchant Tools feature lookup...' and a magnifying glass icon.

The main area is divided into several sections:

- Content:** Libraries, Library Folders, Content Assets, Import & Export, Page Designer.
- Customers:** Customers, Customer Groups, Snapshots, Batch Processes, Import & Export.
- Custom Objects:** Custom Object Editor, Batch Processes, Import & Export.
- SEO:** URL Rules, URL Redirects, Static Mappings, Dynamic Mappings, Robots, Aliases, Customer CDN Settings, Sitemaps, URL Request Analyzer, Page Meta Tag Rules.
- Products and Catalogs:** Products, Product Sets, Catalogs, Product Options, Variation Attributes, Recommendations, Price Books, Inventory, Catalog Feeds, Batch Processes, Import & Export.
- Search:** Search Indexes, Search Index Rebuild Schedule, Search Index Query Testing, Search Dictionaries, Searchable Attributes, Search Driven Redirects, Stop Word Dictionary, Category Name Exclusions, Synonym Dictionary, Hyphenm Dictionary, Compound Word Dictionary, Common Phrase Dictionary, Search Suggestions, Stemming Exceptions, Keyword Groups, Sorting Rules, Storefront Sorting Options, Search Preferences, Import & Export.
- Online Marketing:** Campaigns, A/B Tests, Promotions, Content Slots, Coupons, Source Code Groups, Active Data, Stores, Gift Certificates, Import & Export.
- Site Preferences:** Locking, Baskets, A/B Tests, Locales, Currencies, Source Codes, Gift Certificates, Search Preferences, Sequence Numbers, Order, Coupons, Promotions, Deprecated Storefront Toolkit, Storefront URLs, Custom Preferences, Pinterest Commerce, Privacy, Customer Service Center Preferences, Apple Pay.
- Ordering:** Orders, Taxation, Payment Processors, Payment Methods, Shipping Methods, Import & Export.
- Analytics:** Reports and Dashboards (New!), Conversion Reports, Purchase Reports, Catalog Reports, Search and Navigation Reports, Customer Reports, Traffic Reports, A/B Testing Reports, Technical Reports, Legacy Reports.
- Customer Service Center:** This section is highlighted with a green border.

2. Find the order you want to void:

The screenshot shows the Customer Service Center interface. At the top, there's a 'WELCOME' message and a 'Logout' link. Below the header, a message says 'Welcome to Customer Service Center!'. There are three main buttons:

- Find Order** (highlighted in yellow)
- Create New Order**
- Find Customer**

3. Click the order. The next window shows the order details, as below. Click **More** to see the void-sale feature:

LATAM Payments

The cartridge supports payments from the following Latin American countries:

- Argentina
- Bolivia
- Brazil
- Central America (Costa Rica, Nicaragua, El Salvador, Honduras, Panama, Guatemala)
- Chile
- Colombia
- Ecuador
- Mexico
- Peru
- Uruguay

Prerequisite: You must have a legal entity in each Latin American country that you want to trade in
 This feature also includes LATAM payments by instalments.

To enable this feature in the cartridge

1. In Business Manager, Go to *Merchant Tools/Custom Preferences/Worldpay-LATAMPayments*
2. Enable Instalments for LatAm Countries to Yes
3. Enable CPF to Yes

Name	Value	Default Value
Enable Instalments For LatAm Countries (enableInstalmentsForLatAm)	Yes	
Enable CPF (enableCPF)	Yes	

Site Preferences

Go to *Merchant Tools/Custom Preferences/Worldpay-LATAMPayments*:

The screenshot shows the Salesforce Setup interface with the following configurations:

- Enable Installments For LatAm Countries**: Set to Yes. Default Value: Yes. Edit Across Sites.
- LatAm Countries Applicable For Installment**: Includes BR, MX, CO, PE, CL, CR, SV, GT, HN, NI, PA.
- Enable CPF**: Set to Yes. Default Value: Yes. Edit Across Sites.
- Installment For Mexico***: Options include None, ONE TIME (1), 3 Months (3), 6 Months (6), 9 Months (9), 10 Months (10), 12 Months (12), and 15 Months (15). Default Value: ONE TIME. Edit Across Sites.
- Installment For Country Codes BZ, CL, CR, SV, GT, HN, NI, PA, PE***: Options include None, 3 Months (3), 6 Months (6), 9 Months (9), 10 Months (10), 12 Months (12), 18 Months (18), 24 Months (24), 36 Months (36). Default Value: ONE TIME. Edit Across Sites.
- Installment For Country Codes BZ, CL, CR, SV, GT, HN, NI, PA, PE***: Options include None, 3 Months (3), 6 Months (6), 9 Months (9), 10 Months (10), 12 Months (12), 18 Months (18), 24 Months (24), 36 Months (36), ONE TIME (1). Default Value: ONE TIME. Edit Across Sites.
- Installment For Argentina and Brazil***: Options include None, ONE TIME (1), 2 Months (2), 3 Months (3), 4 Months (4), 5 Months (5), 6 Months (6), 7 Months (7), 8 Months (8), 9 Months (9), 10 Months (10), 12 Months (12), 18 Months (18), 24 Months (24), 36 Months (36). Default Value: ONE TIME. Edit Across Sites.
- Installment For Columbia***: Options include None, 3 Months (3), 6 Months (6), 9 Months (9), 10 Months (10), 12 Months (12), 18 Months (18), 24 Months (24), 36 Months (36). Default Value: ONE TIME. Edit Across Sites.

The shopper's experience

Once you have configured your system, shoppers will notice some new features. These are described below:

Three new fields in the credit-card payment section:

- CPF (only for Brazil)
- Instalments-type dropdown (only for LATAM countries)

*Phone Number
9879879879

CPF

Installments
ONE TIME

*Name on Card

*Card Number

*Expiration Month *Expiration Year

month year

*Security Code

The Latin America-specific fields (*CPF/CPNJ, Instalment*) appear once the administrator has enabled them. The billing address must be in one of the Latin American countries.

Recommendation for Brazil only

There are three variations of fields that should be visible for payments from Brazil:

1. Only CPF is enabled. (The *CPF* field is visible).
2. Only Instalments is enabled. (The *Instalment* fields are visible).
3. Both CPF and Instalments are enabled. (The *CPF*, *Instalment* fields are visible).

NOTE: At present, Worldpay domestic acquiring in LATAM only covers MasterCard and Visa.

Worldpay documentation:

Follow the link for information on Latin America integration:

- <https://developer.worldpay.com/docs/wpg/latinamericaintegration/>

Order notifications

You must set up order notifications to make sure the cartridge works properly.

To do this, go to the Merchant Administration Interface and configure this URL to receive order notifications:

https://mechantsandbox/Worldpay-Notify

Order notifications are captured from the Worldpay payment service when a payment reaches one of the following statuses:

- AUTHORISED
- CANCELLED
- CAPTURED
- EXPIRED
- SENT_FOR_REFUND
- REFUSED
- SETTLED
- INFORMATION_REQUESTED
- CHARGED_BACK
- POST AUTH CANCELLED

When the payment status changes, Worldpay use the configured URL to push the order status to SFCC.

The secure route function is called Worldpay-Notify. It provides the path that SFCC uses to receive order notifications. When a payment status changes at Worldpay, SFCC receives an HTTPS message through Worldpay-Notify.

SFCC sends an HTTP 200 (OK) response to Worldpay to acknowledge receipt of the notification. For each order notification received, SFCC creates a custom object with the order number and order notification XML captured. Then the SFCC job runs (manually or scheduled), to process those custom objects and update the orders that correspond to each order notification.

If Worldpay does not receive the notification acknowledgement, there is a retry mechanism. For the first

notification, Worldpay waits an hour for the acknowledgement from SFCC before it starts to send the notification again at five-minute intervals. This continues for a week until SFCC acknowledges the notification.

For more details on configuring order notifications using the MAI, see the [Worldpay Merchant Admin Interface guide](#).

Order notification batch job

The *OrderNotificationUpdatesJob* is a batch job you can run manually or schedule at specific intervals. For example, every two minutes, five minutes, and so on. The job consists of a four-stage process:

Pick the details stored in custom objects in the same order in which they were created. SFCC creates the custom objects as part of the notification process.

1. Read the custom objects one by one and update their statuses in the Business Manager (order status, payment status, confirmation status) depending on the notification status.
2. Update the token details for the shopper's credit card.
3. The final task is to remove the custom object once the steps above are complete.

To manage the Order notification batch job, go to *Admin/Operations/Jobs* and click **OrderNotificationUpdatesJob**.

Tab	Description
General	ID: OrderNotificationUpdatesJob Description: Batch job for reading Custom Objects of Order Notifications and updating Order Statuses Priority: Normal
Schedule and History	(Not visible)
Resources	(Not visible)
Step Configurator	(Not visible)
Notification	(Not visible)
Failure Handling	(Not visible)

Step Configuration	ExecuteScriptModule
ID	OrderNotificationUpdatesJob
Description	Batch job for reading Custom Objects of Order Notifications and updating Order Statuses
ExecuteScriptModule Module	artridge/kernels/jobs/OrderNotificationUpdatesJob.js
ExecuteScriptModule Function Name	orderNotificationUpdateJob
ExecuteScriptModule Transactional	True
ExecuteScriptModule Timeout in Seconds	60

There are several tabs in the screen above. See the table for a description of these tabs:

Tab	Description
General	Provides the general information about the ID and description of the job.
Schedule and History	<ul style="list-style-type: none"> Shows if the job schedule is enabled or not. If enabled, it shows the frequency of the schedule Shows the job-run history such as execution scope, status (success or failure), start and end time, duration and a link to download the log file
Resources	Enables you to specify system or custom resources to be locked by the job so that other jobs will not modify them.
Job Steps	Shows the logical tasks involved in the overall job.
Failure Handling	Enables you to specify what your job does if it fails. For example, continue as scheduled, retry or stop-on-error.
Notification	<ul style="list-style-type: none"> Gives you the option to enable or disable notification Enables you to select the events (success, failure, retry, long running) you want to receive notification about From, To, CC and BCC sections to provide notification contacts

The tabs above are present in all the jobs listed in this guide. You can find details of each job in the Business Manager.

Error handling for the order notification job

See Operations and maintenance for error codes and error messages when running this job.

Transaction-payment status handling for the order notification job

See Operations and maintenance for the mapping of different status on receipt of different order notifications.

Notification update service

The service used by SFCC retrieves the status of an individual order status, which is reflected in the order history of shopper account.

The notification update service returns a JSON object. The service can either pull the latest status or the complete status history. If the order number or status history is not found, the service returns an error JSON.

Worldpay-GetNotificationUpdates is the route used to get the history of notifications received about a particular order. This service takes two http parameters, they are:

- orderNo
- allupdates

If `allupdates` is true, all notifications received for the order are returned as a JSON response. If `allupdates` is false, only the latest notifications received for the order are returned as a JSON response.

All values for `allupdates` (i.e, true, TRUE, True) are considered as true. Any value other than these is considered false.

Here is an example of the JSON response when `allupdates` is true:

```
{"statusList":  
  [{"status":"AUTHORISED:Mon Nov 10 2014 08:11:24 GMT-0000 (GMT)"},  
   {"status":"CANCELLED:Mon Nov 11 2014 08:11:24 GMT-0000 (GMT)"},  
  ],  
 }  
}
```

Here is an example of the JSON response when `allupdates` is false:

```
{"latestStatus":  
  [{"Status":" CANCELLED:Mon Nov 11 2014 08:11:24 GMT-0000 (GMT)"}]  
 }  
}
```

MOTO payments

Mobile or telephone orders occur when customer-service staff place the order for the shopper using a credit/debit card. To make MOTO payments your staff must enable `Login_on_behalf` and `Login_Agentpermission`.

To do this:

1. Go to `Admin/Organization/Roles` and `permission`.
2. Click **Roles**.
3. Click **Functional Permission**.
4. Select your site.
5. Assign `Login_on_behalf` and `Login_Agentpermission`.

The screenshot shows the Salesforce Admin interface with the following details:

- Header:** Sandbox - zzkv MobileFirst
- Navigation:** Merchant Tools, Administration, Storefront, Toolkit
- User:** Devidas Aniyath
- Section:** Administration > Organization > Roles > Administrator - Functional Permissions
- Tab:** Functional Permissions (highlighted with a green box)
- Content:**
 - Selected Context:** None
 - Select Context:** Button (highlighted with a green box)
 - Table:** Permission | Description | Select Context (with a green box around the 'Select Context' column header)
 - Buttons:** Reset, Update
 - Link:** << Back to List

The screenshot shows the 'Select Context' dialog box with the following details:

- Title:** Select Context
- Text:** Select a context to view and edit permissions. Organization and Sites can't be selected at the same time.
- Options:**
 - Organization
 - Sites
 - MobileFirst
 - RefArch
 - RefArchGlobal
- Buttons:** Cancel, Apply

Administrator > Organization > Roles > Administrator - Functional Permissions.

General Users Business Manager Modules **Functional Permissions** WebDAV Permissions Locale Permissions Price Adjustment Limits Customer Service Center Permissions.

Administrator - Functional Permissions

This list shows all functional permissions available in the system. Click Select Context to specify for which context you'd like to modify permissions. Available context options are the organization, one site, or multiple sites. Select the checkboxes and use the Update button at the bottom of the page to grant certain functional permissions. Deselect the checkboxes and use the Update button to revoke specific functional permissions.

Permission	Description	Selected Context: MobileFirst
Login_On_Behalf	Allows administrators to log into the Storefront on behalf of a customer.	<input checked="" type="checkbox"/>
Replication_Run_For_Site	Allows to manage and start data replication processes for site-specific replication groups (i.e. search indexes).	<input type="checkbox"/>
Login_Agent	Allows to log in as an agent user to the Storefront. Restrict the access to only those Business Manager users that have the permission 'Login_Agent'.	<input checked="" type="checkbox"/>
Manage_Site_Catalog	Allows to manage the catalog and its assets in the selected site.	<input type="checkbox"/>
Manage_Site_Library	Allows to manage a library and its assets in the selected site.	<input checked="" type="checkbox"/>
Manage_Site_PriceBooks	Allows to manage the price books assigned to the selected site.	<input type="checkbox"/>
Manage_Site_Inventory	Allows to manage the site inventory list and its inventory records in the selected site.	<input type="checkbox"/>
Adjust_Item_Price	Allows to add or delete a price adjustment at the item level.	<input checked="" type="checkbox"/>
Adjust_Shipping_Price	Allows to add or delete a price adjustment at the shipping level.	<input checked="" type="checkbox"/>

MobileFirst Time Zone: Coordinated Universal Time | Instance Time Zone: Eastern Daylight Time | Version: 20.0 Last Updated: Jul 23, 2020 (Compatibility Mode: 19.10)

You can handle Moto payments in two ways:

1. Customer service staff place the order from Business Manager.
2. Customer service staff place the order from the storefront.

We describe these two ways below.

Customer service staff place the order from Business Manager

To implement this, update the following settings in your Business Manager. This is to disable the *Amount to be paid* field in the credit card payment section. Do the following:

1. Go to Admin/Site Development/Customer Service Center Settings.
2. Open the Order Payment Instrument in the customizable area.
3. Update the existing condition to:

```
"condition" : "data.payment_method_id === 'CREDIT_CARD'" Search for "condition" :
"data.country !== 'FR'",
```

4. After that add:

```
"meta
{
  "disabled" : true
}
```

5. The customer service center customization works with OCAPI settings, so go to *Admin/Site Development/Open Commerce Settings* and make sure your site has access to:

'POST /orders/{order_no}/payment_instruments'

See the screenshots below for a step-by-step guide on how to take MOTO payments:

1. Navigate to the Customer service Center.

The screenshot shows the Salesforce Merchant Tools interface. At the top, there's a navigation bar with the Salesforce logo, the environment name 'Sandbox - worldpay03 MobileFirst ▾', and links for 'Merchant Tools' (which is currently selected), 'Administration', 'Storefront', and 'Toolkit'. Below the navigation bar is a search bar containing 'Merchant Tools feature lookup...' with a magnifying glass icon. The main content area is divided into several sections: 'Content' (Libraries, Library Folders, Content Assets, Import & Export, Page Designer), 'Customers' (Customers, Customer Groups, Snapshots, Batch Processes, Import & Export), 'Custom Objects' (Custom Object Editor, Batch Processes, Import & Export), 'SEO' (URL Rules, URL Redirects, Static Mappings, Dynamic Mappings, Robots, Aliases, Customer CDN Settings, Sitemaps, URL Request Analyzer, Page Meta Tag Rules), 'Products and Catalogs' (Products, Product Sets, Catalogs, Product Options, Variation Attributes, Recommendations, Price Books, Inventory, Catalog Feeds, Batch Processes, Import & Export), 'Ordering' (Orders, Taxation, Payment Processors, Payment Methods, Shipping Methods, Import & Export), 'Search' (Search Indexes, Search Index Rebuild Schedule, Search Index Query Testing, Search Dictionaries, Searchable Attributes, Search Driven Redirects, Stop Word Dictionary, Category Name Exclusions, Synonym Dictionary, Hypernym Dictionary, Compound Word Dictionary, Common Phrase Dictionary, Search Suggestions, Stemming Exceptions, Keyword Groups, Sorting Rules, Storefront Sorting Options, Search Preferences, Import & Export), 'Online Marketing' (Campaigns, A/B Tests, Promotions, Content Slots, Coupons, Source Code Groups, Active Data, Stores, Gift Certificates, Import & Export), 'Analytics' (Reports and Dashboards (New!), Conversion Reports, Purchase Reports, Catalog Reports, Search and Navigation Reports, Customer Reports, Traffic Reports, A/B Testing Reports, Technical Reports, Legacy Reports), and 'Site Preferences' (Locking, Baskets, A/B Tests, Locales, Currencies, Source Codes, Gift Certificates, Search Preferences, Sequence Numbers, Order, Coupons, Promotions, Deprecated Storefront Toolkit, Storefront URLs, Custom Preferences, Pinterest Commerce, Privacy, Customer Service Center Preferences, Apple Pay). The 'Customer Service Center' link is highlighted with a green box.

2. Select Create New Order.

3. Input the shopper's details and click Submit Order:

4. Select the Worldpay MOTO payment method listed in the Payment Methods section:

5. Input the shopper's credit card details and click Save:

6. Successful order placement:

Customer service staff place the order from the storefront

To enable the storefront button in the Customer Service Center, go to *Merchant Tools/Site Preferences/Custom Preferences* and update your storefront hostname and storefront path. See the instructions below for the ordering procedure:

1. Navigate to the Customer Service Center:

Sandbox - worldpay03

Customer Service Center

2. Click Find Customer:

ORDER SUMMARY WELCOME

Welcome to Customer Service Center!

- To find the shopper's details, provide the customer's name, number or email and click **Storefront**.

The screenshot shows a web browser window with multiple tabs open. The active tab is titled 'Customer Search' and has the URL <https://worldpay01-tech-prtnr-eu04-dw.demandware.net/on-demandware.store/Sites-Site/default/ScreenDispatcher-CSC?site=MobileFirst...>. The page displays a search results table with columns: NUMBER, LOGIN, NAME, ADDRESS, EMAIL, and COMPANY. One row is visible, showing '00017001', 'karthicksapient@gmail.com', 'Karthick Nagarajan', '60563 Naperville', 'karthicksapient@gmail.com', and 'COMPANY'. A tooltip appears over the 'COMPANY' column with the text 'Browse the storefront on behalf of customer number '00017001''. Below the table are buttons for 'New Order' and 'Storefront...'. The browser's taskbar at the bottom shows various pinned icons.

- In the storefront checkout page, MOTO does not appear as a payment method. Instead use the available credit card payment methods. The request proceeds as a MOTO order:

The screenshot shows a web browser displaying the Salesforce commerce cloud storefront. The top navigation bar includes a dropdown for 'Devidas', a language selector for 'English (United States)', and a search bar. Below the header, there are links for 'New Arrivals', 'Womens', 'Mens', and 'Top Sellers'. A prominent banner encourages users to 'Email' and 'Subscribe' for 15% off. The footer provides links for 'Locate Store', 'Account' (My Account, Check Order, Wish List, Gift Registry), 'Customer Service' (Contact Us, Gift Certificates, Help, Site Map), and 'About' (About Us, Privacy, Terms, Jobs). Copyright information at the bottom states '© 2004-2016 Commerce Cloud, a Salesforce company. All Rights Reserved.' and 'This is a demo store only. Orders made will NOT be processed.'

One-click payment

In a normal checkout process, the shopper must pass through the shipping, billing and payment forms. Each form needs shopper interaction to select a shipping address, billing address and payment type.

One-click payment reduces the number of clicks which speeds up and simplifies the process of placing an order for a registered shopper.

To enable this feature

- In Business Manager, go to *Merchant Tools/Custom Preferences/ Worldpay-CheckoutFeatures*.
- Set the *Enable Quick Checkout* field to Yes.

Enable Quick Checkout (isQuickCheckoutEnabled)	<input type="button" value="Yes"/> <input type="button" value="No"/>	Edit Across Sites
---	--	-----------------------------------

Who can use one-click payments?

Shoppers must meet the following requirements to be able to use the one-click payment feature on the storefront. The shopper must:

1. Be logged in.
2. Have at least one saved address.
3. Have at least one saved credit card in *My Account*.
4. Have at least one product in cart.

The shopper's experience

The payment button is visible on the mini cart and cart pages as shown in the screenshots below.

In cart page

In mini cart page

The screenshot shows a web browser window for a Salesforce commerce cloud store. At the top, there's a navigation bar with 'Robin' and 'English (United States)'. Below it, a menu bar includes 'New Arrivals', 'Womens', 'Mens', and 'Top Sellers'. A search bar and a shopping cart icon are also present. The main content area features a 'Locate Store' section and links for 'Account', 'Customer Service', and other site navigation. On the right, a 'Your shopping cart' overlay is displayed, showing a single item: 'Wide Leg Pant' in Sugar color, Size 12, In Stock. The price is listed as 'Each \$79.00 \$54.99' with a quantity of 1. The total is '\$54.99'. Below the cart, there are three blue buttons labeled 'Checkout', 'Chrome Pay', and 'Quick Checkout'. At the bottom of the page, a copyright notice reads '© 2004-2016 Commerce Cloud, a Salesforce company. All rights reserved. This is a demo store only. Orders made will NOT be processed.'

Chrome payment

Chrome Pay speeds up the checkout process. It uses saved data from the browser (Chrome only for now) and displays it in the checkout forms. This data includes the shipping and billing address details. Every action occurs in one popup window.

In admin, configurations are available to:

- Enable/disable this feature
- Enable/disable 3DS2
- Include/exclude risk data in the payment request

Site preferences and service configuration:

1. Go to *Merchant Tools/Site Preferences/Custom Preferences/Worldpay-CheckoutFeatures*.
2. Select *isQuickChromePayEnabled* field and select Yes to enable.

Name	Value	Default Value
<i>isQuickChromePayEnabled</i> (<i>isQuickChromePayEnabled</i>)	Yes	No

To enable 3DS2 for this feature, do the following:

1. Go to *Merchant Tools/ Site Preferences/Custom Preferences/Worldpay-SecureTransaction*.
2. At the 3DS Type (*dstype*) field, select *two3D* (*two3d*).

Name	Value	Default Value	
<i>3ds Type</i> (<i>dstype</i>)	<i>two3d</i> (<i>two3d</i>)	<i>one3d</i>	Edit Across Sites

To enable the collection of risk data for this feature, do the following:

1. At the *riskData* (*riskData*) field, select Yes.

Name	Value	Default Value
riskData	No	
(riskData)		

[Edit Across Sites](#)

In Admin, to change the 3ds2 service configuration do the following:

1. Go to *Administration/Operations/Services*.
2. The service name is *ddc.post*.

The screenshot shows the 'Services' tab selected in the top navigation bar. Below it, a table lists a single service entry: 'ddc.post'. The table columns include 'Name', 'Type', 'Profile', 'Credentials', and 'Status'. The 'Name' column shows 'ddc.post', 'Type' is 'HTTP', 'Profile' is 'worldpayprofile', 'Credentials' is 'DeviceDataCollection', and 'Status' is 'Live'.

The shopper's experience

Mini cart

1. From a Mini cart, the shopper clicks the **Chrome Pay** button to start the checkout process:

2. The shopper clicks the **Pay** button.

3. The shopper enters their CVC number from their payment card. Chrome Pay does not save this number, and the shopper clicks the **Confirm** button. The payment is made.

Cart

1. From a cart, the shopper clicks the **Quick Checkout** button to start the checkout process:

- The shopper clicks the **Pay** button.

This screenshot shows the payment review step of the checkout process. The top section displays the order summary, shipping address, shipping method, payment method (Pay with Worldpay), and contact info. The bottom section shows the total amount (\$51.45) and two buttons: 'Continue' (highlighted with a red box) and 'Cancel'. A 'Chrome Pay' button is also visible at the bottom right.

- The shopper enters their CVC number from their payment card. Chrome Pay does not save this number, and the shopper clicks the **Confirm** button. The payment is made.

This screenshot shows the card details entry step. It includes fields for card number, name on card, expiry date, security code, and back of card. The 'Complete payment' button is highlighted with a red box. Other buttons include 'Cancel' and 'Checkout'.

Architectural diagram

Worldpay documentation

Please read the [Worldpay documentation on 3DS2](#).

Google Pay

Google Pay is a digital wallet platform and online payment system developed by Google. It is one of the simplest and fastest ways to pay for something.

Business Manager configuration

To enable Google Pay payment method, in Business Manager

1. Go to *Merchant Tools/Ordering/Payment Methods*
2. Select **PAYWITHGOOGLE-SSL** and enable

Payment Methods			
Payment methods are managed here. To create a new payment method, click the New button. To remove a payment method click the remove icon in the payment method row. The default payment methods can't be removed, and their IDs can't be changed. When you select the CREDIT_CARD payment method, credit/debit cards can be reordered through drag-and-drop.			
ID	Name	Enabled	Sort Order
PAYPAL-EXPRESS	Pay Pal	Yes	15
PAYWITHGOOGLE-SSL	Google Pay	Yes	29
POLI-SSL	Poli	Yes	27
PRZELEWY-SSL	Przelewy24	Yes	25
SEPA_DIRECT_DEBIT-SSL	SEPA	Yes	30
SOFORT-SSL	Sofort	Yes	18
SOFORT_CH-SSL	Sofort	Yes	16

3. Go to *Merchant Tools/Site Preferences/Custom Site Preference Groups/Worldpay-Mobile Wallets*.

Below is a screenshot of the test environment.

The screenshot shows the 'Mobile wallets configurations' page in the Salesforce 'Custom Site Preference Groups' section. It lists several configuration items:

- Name:** Google Pay Environment
Value: TEST (TEST)
Default Value: TEST
- Name:** Google Pay Merchant ID
Value: 32e06907d379490
Default Value: gatewayMerchantId
- Name:** Google Merchant Name
Value: gPayMerchant
Default Value: gatewayMerchantName
- Name:** Gateway Merchant Id
Value: 32e06907d379490
Default Value: gatewayMerchantId
- Name:** Gateway Merchant Name
Value: worldpay
Default Value: gatewayMerchantName
- Name:** Google Pay 3ds Flex Magic Value For Test Environment
Value: (googlePayTest3DSValue) (String)
Default Value: (googlePayTest3DSValue) (String)

NOTE: ‘Google Pay 3ds Flex Magic Value For Test Environment’ is the field for providing the 3DS magic value. Use this value to test the functionality of Google Pay SCA (Google pay + 3DS2) in a lower environment. An example value is **3DS_V1_CHALLENGE_IDENTIFIED**

The shopper's experience

Here is a typical successful shopper journey:

1. Payment Method – Choose Google Pay as the payment method and submit the payment.

The screenshot shows a payment interface with the following elements:

- A header box labeled "Google Pay".
- A form field labeled "*Phone Number" containing the value "9879879879".
- A large black button labeled "Buy with G Pay".
- A blue footer bar labeled "Next:Place Order".

2. Review the order and place the order.
3. If the challenge page appears, complete the challenge. You can see a screenshot from the test environment below. In production, the challenge page varies based on the issuing bank's provider.

Apple Pay

Apple Pay is a mobile payment and digital wallet service from Apple Inc. that lets users make payments in person, in iOS apps, and on the web using Safari.

This feature lets shopper's select Apple Pay as the payment method from the billing page. The Apple Pay wallet contains saved card details. This makes Apple Pay a quick and secure payment method.

A payment token generated from the shopper's device is used in a payment authorization request.

The `auth` response contains a series of links for the next available actions.

Apple Pay certificate generation

Before you can use Apple Pay, you need to generate a certificate and we (Worldpay) must verify this certificate.

1. [Create your merchant ID](#) (e.g., `merchant.com.worldpay.merchantAccount`) then log in to your Worldpay merchantaccount.
2. Switch to the mode you'll be using (test or production), then select Integration from the left-hand menu and Apple Pay in the top menu. You can see these details in the screenshot below:

Configuration Details Merchant Environment Merchant Channel Installations 3DS Flex Client Side Encryption **Apple Pay** Android Pay

Apple Pay - Key Management for SAPIENTNITROECOMMERCEV1

Current CSRs

Creation Date	Apple Merchant ID	Certificate Sign Request	Change Status	Delete	Linked merchants
2020-01-09 10:28:29	merchant.com.publicissapient.ecom	Download csr file	Enable	Delete	Manage
2020-03-04 10:35:34	merchant.com.publicissapient.ecom.live	Download csr file	Disable	Delete	Manage

3. Enter your Apple merchant ID and click the Generate button (if not generated already). Now you can see the certificate signing request (CSR) that you generated. Download that file so you can create your payment-processing certificate.
4. **Enable Apple Pay** on the Apple developer website.
5. **Create a payment processing certificate** on the Apple developer website, but please note the following:
 - Make sure you enter the Apple merchant ID you created in step 1
 - Skip the step in which you create an Apple-generated CSR
 - Instead, select the Worldpay CSR you generated step 1
 - Download and save the payment processing certificate you generated (.cer file)
6. When you have completed the steps on the Apple developer website, send the payment processing certificate you downloaded to Worldpay. You'll then need to wait until Worldpay confirms that the certificate is activated.
7. **Register and validate your merchant domain** with Apple, making sure to use the Apple merchant ID you created in step 1.
8. **Create a merchant identity certificate**.

For each transaction you must request a session from Apple using your merchant identity certificate. Remember the following when you create your Apple merchant identity certificate:

- When asked for your merchant ID, make sure you enter the Apple merchant ID you created in step 1.
- Follow the instructions from Apple for creating a CSR yourself

Note: The CSR you generated from Worldpay can't be used for creating a merchant ID certificate. Instead generate a CSR of your own and use that to generate the merchant ID certificate:

1. Download and save the generated merchant ID certificate (.cer file).
2. When you have completed the instructions from Apple, add the merchant ID certificate to your keychain.
3. When you create your own CSR, you might also get a private key. Add that file too in your keychain app.
4. Export the merchant ID certificate from your keychain as a p12 file (see screenshot below).

a.

5. Make a note of the password you entered in the field shown below:

Business Manager configuration

To configure Business Manager, do the following:

1. Go to *Merchant Tools/Ordering/Payment Methods*.
2. Enable the Payment Method with the ID as DW_APPLE_PAY.
3. Select the payment processor as WorldPay.
4. Under custom section, select the type as DIRECT, See the screenshot below:

5. Go to Merchant Tools/ Site Preferences/Apple Pay.

6. Fill in the form as shown in the screenshot below.
7. Provide values for merchant ID and merchant name as provided by Worldpay.

Please enter your site information below. Fields marked with an asterisk (*) are mandatory. Click Submit when you've finished updating your configurations.

Complete the domain registration for the sandbox

Domain Registration

You must register the domain for your site with Apple in order to use Apple Pay.

The currently configured domain for this site is zzkv-001.sandbox.us01.dx.commercecloud.salesforce.com.	
Apple Sandbox	
Registered Sandbox Domains zzkv-001.sandbox.us01.dx.commercecloud.salesforce.com zzkv-009.sandbox.us01.dx.commercecloud.salesforce.com	
Unregister Apple Sandbox	Register Apple Sandbox

Once you have completed the steps above, the Apple Pay button appears on the billing page (Mac, Safari browser with touch bar enabled/latest iPhone).

Apple pay address validation US/non-US countries

In most cases, the country code and state code are mandatory fields in the order life cycle. In some countries, the state code is not applicable, which means the address validation would fail because of the shipping and billing address. To avoid this, a new custom preference ('skipStateCodeAddressValidation') is created that validates the address accordingly.

When the custom preference 'skipStateCodeAddressValidation' is enabled, the state code validation will be skipped for Apple Pay orders. By default, this flag is set to 'No' or disabled.

1. Go to *Merchant Tools/Site Preferences/Custom Site Preference Groups/AccessWorldPay-Mobilewallets*

2. Enable or disable ‘skipStateCodeAddressValidation’ for the state code validation in the address.

State Code Address Validation

(skipStateCodeAddressValidation)
If set to true, the state code validation will be skipped for apple pay (US and non-US countries).

Yes No

If set to true, the state code validation will be skipped for apple pay (US and non-US countries).

The shopper's experience

1. When a shopper enters the checkout flow under the billing section, the Apple Pay payment method is available.

2. The shopper enters their email ID, phone number and then clicks the Apple Pay button. A payment overlay pops up with the card details stored in the wallet.

3. The shopper can then select an existing card or add a new card for the payment.
4. They can then add or select a shipping/billing address, a shipping method, and a contact phone number.
5. The shopper can make an Apple Pay order by entering their password or authenticating with biometrics.

NOTE: Typical errors that may occur during this payment process include errors in shipping address/billing address or payment failure. If an error occurs, the shopper is redirected to the cart page with an error message.

PDP and Quick View Apple Pay limitations or exceptions (SFRA OOTB)

The Apple Pay button in the PDP and Quick View has a technical limitation. It only accepts a single SKU (Stock Keeping Unit) for the checkout. As such, it's not possible to add or checkout multiple products from the PDP or Quick View flows.

Set products: Only individual products in a set are eligible for Apple Pay checkout from the PDP and quick view. *Add all to Cart* is not supported by Apple Pay in this view.

Bonus products: Only the main product of a bonus product is eligible for Apple Pay checkout.

Bundle products: Bundle products are not eligible for Apple Pay checkout from the PDP and quick view flows. This is because a bundle counts as a multiple SKU scenario.

Tokenization

Tokenization is the process of protecting sensitive data including the shopper's PAN (primary account number) by replacing it with a secure identifier called a token. When tokenization is enabled, payment processing is carried out using this token instead of sharing PAN details over the network. Payments using tokens are PCI level SAQ A.

To enable / disable this feature

- In Business Manager, navigate to Site/Merchant Tool/Site Preferences/Custom Preferences/Worldpay-AccountOnFile
- Turn on *WorldpayEnableTokenization*

For stored credentials, you have an option to show a disclaimer message. To show a disclaimer message, do the following:

1. Go to Merchant Tools/Custom Preferences/Worldpay-SchemeMandated.
2. Select the show/hide disclaimer button and enter the disclaimer message in the Content-Asset field.
3. Select the following options:
 - a. Show disclaimer in store front - Select Yes to display the disclaimer pop up link to the shopper.
 - b. Is Mandatory for store view – Select Yes to make the shopper to agree with the disclaimer message to place the order and save the payment card details.
4. Go to Merchant Tools/Content/Content Assets/ saveCardDisclaimer.
5. Write or edit the disclaimer text in the Body field and click Download.

Is Disclaimer Mandatory? No Yes Edit Across Sites

Show Disclaimer in the Frontend Yes Yes Edit Across Sites

The screenshot shows a configuration interface for a payment gateway. In the 'Content' section, there is a 'Body' field containing the text 'Do You Want To Save The Card?'. Below this is a 'Year:' field. At the bottom right are 'Download', 'Apply', and 'Reset' buttons.

The shopper's experience:

1. Show a disclaimer in the front end

The screenshot below shows the *Disclaimer* link at the lower left corner of the window below the *Save Card to Account* checkbox. This link does not appear if you disable the disclaimer in the front end.

The screenshot shows a payment form with various fields. At the bottom left, there is a checkbox labeled 'Save Card to Account' with a checked status. To its right, the word 'Disclaimer' is displayed in blue text, which is a link. Above these, there are fields for 'Phone Number', 'Name on Card', 'Card Number', 'Expiration Month', 'Expiration Year', and 'Security Code'. Each field has a required indicator (*). On the right side of the card number input field, there is a small 'CREDIT' button.

2. When “Is Disclaimer Mandatory?” is enabled

When the disclaimer is mandatory, your shoppers see a window like the one below. To place an order, shoppers select any of the options (Agree/Disagree). If shoppers do not do this, an error message appears. See the yellow sentence on the screen below

The screenshot shows a payment form with fields for credit card information. At the bottom, there is a checkbox labeled "Save Card to Account" followed by a "Disclaimer" link. A yellow highlighted box contains the text "Please click on the disclaimer button to continue, and chose yes to save your card". A blue button at the bottom right says "Next: Place Order".

If the shopper views the disclaimer and clicks **Yes** to save the card, the system saves the card details, and the order is placed. See screenshot below:

The screenshot shows a payment form with fields for credit card information. A modal dialog box titled "Disclaimer" is open, asking "Do You Want To Save The Card?" with "Yes" and "No" radio buttons. Below the dialog, the main form shows the "Save Card to Account" checkbox checked and the same yellow-highlighted disclaimer text. A "Close" button is visible in the dialog.

If the shopper selects **No**, the system does not save the card details and the **Save card** checkbox automatically unchecks. The order is placed as normal.

3. When “is Disclaimer Mandatory” is disabled

The screenshot shows a payment form with the following fields:

- Credit Card Details:**
 - *Expiration Month: month
 - *Expiration Year: year
 - *Security Code: [redacted]
- Save Card to Account
- Disclaimer:** Please click on the disclaimer button to continue, and chose yes to save your card

A blue button at the bottom says "Next: Place Order".

If the shopper clicks the disclaimer link and selects **Yes**, the system saves the card details, and the order is placed.

If the shopper selects **No** the card details are not saved. The **Save card** checkbox is unchecked but the order is placed.

If the shopper did not open the disclaimer or did not select any option, the system defaults to the **No** option. Card details are not saved, but the order is placed.

Note: If the shopper does not give the mandatory card details, or the format is wrong, the system does not save the card details. This occurs even though the **Stored Credentials** option is enabled.

Worldpay documentation

Please read the [Worldpay documentation](#) on stored credentials.

EFTPOS

EFTPOS is an Australian domestic card scheme, for which Worldpay is an acquirer. EFTPOS supports processing multi/dual debit transactions in real-time, with a lower cost of acceptance. To offer EFTPOS, merchants must have an entity in Australia.

Worldpay issues separate MIDs for EFTPOS transactions.

EFTPOS supports:

- 3DS2 (not 3DS1)
- Digital Wallets (Google Pay)
- Merchant-initiated transactions

To enable/disable this feature

- In Business Manager, navigate to Site/Merchant Tool/Site Preferences/Custom Preferences/

Worldpay-PaymentMethod

- Turn on *Enable EFTPOS*
- Enter *EFTPOS Username, Password and Merchant Code*
- You can also enter *RoutingMID* for *EFTPOS*

Enable ETFPOS for Australia (enableEFTPOS)	<input type="text" value="Yes"/>	Enables ETFPOS for Australia	Edit Across Sites
EFTPOS Specific Merchant Code (eftposMerchantCode) (String)	<input type="text"/>	Merchant Code used for EFTPOS	Edit Across Sites
EFTPOS UserName (eftposUserName) (String)	<input type="text"/>		Edit Across Sites

3DS and 3DS Flex

3DS Flex is the most advanced 3DS product on the market, and it gives your transactions extra security. It combines the new standard of 3DS2 with traditional 3DS allowing for a single integration.

To enable 3DS and 3DS Flex:

1. Go to *Site/Merchant Tool/Site Preferences/Custom Preferences/Worldpay-Secure Transaction*

The screenshot shows the 'Secure transaction configurations' page in the Salesforce Merchant Tools. It lists 14 configuration items, each with a name, value, default value, and an 'Edit Across Sites' link. The items include:

- Worldpay.TermURL: Value: Worldpay.HandleAuthenticationResponse, Default Value: Worldpay.HandleAuthenticationResponse
- 3ds.type: Value: two3d (two3d), Default Value: one3d
- Challenge.Preference: Value: challengeMandated (challengeMandated), Default Value: noPreference
- challengeWindowSize: Value: fullPage (fullPage)
- riskData: Value: No
- Authentication.Method: Value: localAccount (localAccount)
- DDC.URL: Value: https://secure-test.worldpay.com/shopper/3ds/ddc.html
- Challenge.URL: Value: https://secure-test.worldpay.com/shopper/3ds/challenge.html
- JWT.MAC.Key: Value: fe23ee2-1fb8-45f4-a5805d5cc9e0
- JWT.Issuer: Value: 5bd9e0e444dce153428c940

Worldpay documentation

Follow these links for information about 3DS:

- <https://developer.worldpay.com/docs/wpg/authentication/worldpaympi>
- <https://developer.worldpay.com/docs/wpg/authentication/3dsflexintegration>

Exemption engine

You can request real-time risk analysis of transactions. This is to exempt as many shoppers as possible from strong customer authentication, without unnecessary risk.

Site preferences:

1. Go to Site/Merchant Tool/Site Preferences/Custom Preferences/Worldpay-SecureTransaction.

Name	Value	Default Value
Enable Exemption Engine	No	No
(WorldPayEnableExemptionEngine)		Edit Across Sites
Exemption Type	Optimised Exemption (OP)	Edit Across Sites
(WorldPayExemptionType)		
Exemption Placement	AUTHENTICATION (AUTHENTICATION)	Edit Across Sites
(WorldPayEnableExemptionPlaceme...)		

Worldpay documentation

Follow the link for information on the Exemption Engine:

- <https://developer.worldpay.com/docs/wpg/scaexemptionservices/exemptionengine>

FraudSight

FraudSight is a multi-layered fraud product that combines data insights, technology and a team of experts to predict fraudulent transactions.

It uses machine learning to exploit vast anonymous transactional insights to produce a fraud risk score in real-time. Worldpay will enable this feature – contact them if you want to use it.

FraudSight information is stored in order level attributes. The order level attributes in the table below capture the information in custom attributes.

Order custom attributes	Purpose
isFraudSightOrderReview	Boolean flag that shows if the order is fraudulent. If you set the flag to True, the order is picked for notification. After notification the flag is automatically set to False.
fraudSightRiskMessage	String attribute that holds the risk decision. This risk decision is returned by the FraudSight element.
fraudSightRiskReason	String attribute that holds the risk reason. The risk reason is returned by the FraudSight element.
fraudSightRiskScore	String attribute that holds the risk score. This risk score is returned in the RiskScore element.
riskFinalScore	String attribute that holds the RMM score. This is returned in the RiskScore element.
riskMessage	String attribute that holds the risk message. This risk message is returned in the RiskScore element.
riskProvider	String attribute that holds the risk score provider. The risk score provider is returned in the RiskScore element.
isFraudRiskNotified	Boolean flag that shows if the FraudSight Risk notification has been sent to the merchant or not.

When FraudSight detects fraudulent payment authorization requests, FraudSight returns:

- A risk score
- A risk message
- One or more risk reasons as part of the standard payment response

The custom attributes in the table above are created at order level. These custom attributes store the risk data.

Workflow

Here is what happens during a normal workflow that detects some fraudulent transactions:

1. When the *OrderNotificationUpdatesJob* runs, the payment response is processed, and a flag called *isFraudSightOrderReview* is set. This flag shows if the order is fraudulent.
2. The job, called *OrderNotificationUpdatesJob* populates the order object's custom attributes (see the table above for a list of these custom attributes).
3. When the *NotifyFraudSightOrdersJob* runs, it picks all the flagged fraudulent orders. Then it writes the details to an email body and sends out the notification to the merchant's email ID. You configure this merchant email ID under site preferences. The email contains the list of all fraudulent order numbers and their location in the CSV file.
4. After the notification email is sent, the flag called *isFraudSightOrderReview* on the fraudulent orders is set to false. This ensures that the same orders are not picked during the next job run.

FraudSight order flagging

After an order is placed, the order update response is received. The code example below is one such sample response. This sample response is for the order AUTHORISED status. Notice that the elements *<riskScore>* and *<FraudSight>* act as a major factor to flag the order for fraud notification.

```

<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE paymentService PUBLIC "-//WorldPay//DTD WorldPay PaymentService v1//EN"
"http://dtd.wp.fte08.testworldpay.com/dtd/paymentService_v1.dtd">
<paymentService version="1.4" merchantCode="YOUR MERCHANT CODE">
  <reply>
    <orderStatus orderCode="YOUR ORDER CODE">
      <payment>
        <paymentMethod>VISA-SSL</paymentMethod>
        <amount value="100" currencyCode="GBP" exponent="2" debitCreditIndicator="credit" />
        <lastEvent>AUTHORISED</lastEvent>
        <CVCResultCode description="NO RESPONSE FROM ACQUIRER" />
        <AVSResultCode description="NO RESPONSE FROM ACQUIRER" />
        <balance accountType="IN_PROCESS_AUTHORISED">
          <amount value="100" currencyCode="GBP" exponent="2" debitCreditIndicator="credit" />
        </balance>
        <cardNumber>4444*****1111</cardNumber>
        <riskScore Provider="FraudSight" finalScore="0" id="188a9ae6-21c4-4fd9-87cd-8df4c719aafl" message="low-risk" />
        <FraudSight score="0.00267" id="188a9ae6-21c4-4fd9-87cd-8df4c719aafl" message="low-risk">
          <reasonCodes>
            <reasonCode>Card Unfamiliarity</reasonCode>
            <reasonCode>High Risk Email</reasonCode>
          </reasonCodes>
        </FraudSight>
      </payment>
    </orderStatus>
  </reply>
</paymentService>

```

The table below shows how the FraudSight values in the response are interpreted to derive the flag `isFraudSightOrderReview`.

Response element	Attributes	Value	isFraudSightOrderReview	Comments
<FraudSight>	message	high-risk	True	The payment is refused by FraudSight.
<FraudSight>	message	review	True	Review needed before payment authorization.
<FraudSight>	message	low-risk	False	Payment proceeds to authorization.
<riskScore>	message	high-risk	True	The payment is refused by FraudSight.
<riskScore>	message	review	True	Review needed before payment authorization.
<riskScore>	message	low-risk	False	Payment proceeds to authorization.

The information in the table is applicable for the order statuses: Authorized, Refused and Captured (auto-authorized).

Administrator interaction flow

When the order update notify job runs (`OrderNotificationUpdatesJob`), the fraudulent orders are marked. You (merchants and administrators) can search for fraudulent orders; do the following:

1. Go to `Site/Merchant Tool/Ordering/Orders`.
2. Click the `Advanced` tab as shown below:

The screenshot shows the `Merchant Tools > Ordering > Orders` page. At the top, there are navigation links for Cache, Search Indexes, Code Versions, Cartridge Path, and a search bar. Below the header, a message says "You're using the new Search service." A note states: "This page allows you to search for orders by order number. Select `Advanced` to use more search options. Select `By Number` to search by providing a list of order numbers. Order numbers can be separated by either ; or , or space or newline. Entered text is treated as case-sensitive; substring matching isn't supported." There is an "Order Search" input field containing "Selected Site: MobileFirst" and a "Select Site" button. To the right of the search field are three tabs: Simple, Advanced (which is selected), and By Number.

3. Scroll down and under *Extended Attributes* select *Is FraudSight Order Review* from the drop down, equals **True** and click the **Find** button.

4. This lists all the fraudulent orders. Click any one of the orders and go to the Attributes tab, scroll down to the Custom section and notice the FraudSight attributes.

Fraud Sight Risk Reason:	Card Unfamiliarity,High Risk Email
FraudSight Risk Score:	0.00267
Fraud Sight Risk Message:	review
Is Fraud Sight Order Review:	<input checked="" type="checkbox"/>
Risk Message:	review
Risk Final Score:	0
Risk Score Provider:	FraudSight

Manual operation

If you want to run the *Notify Fraud* orders job manually, other than the job schedule, do the following:

1. Go to Administration/ Operations/Jobs

2. Click the *Job Steps* tab.
3. Select **NotifyFraudSightOrdersJob** and scroll down to the *Custom Parameters* section.

The screenshot shows the Salesforce Job Steps configuration interface. A modal window titled "Select and Configure Step" is open, showing the configuration for the "ExecuteScriptModule" step. The configuration includes:

- Context:** Organization, Site
- ExecuteScriptModule.Transactional:** Checked
- ExecuteScriptModule.TimeoutInSeconds:** Job Parameters
- Always execute on restart:** Unchecked
- Custom Parameters:**

ID*	Value*
status	0,3,4,5
- Exit Status Rules:** Add Rule

Notice the Custom Parameters with ID and Value. This custom attribute helps to restrict the orders found with a particular status, rather than picking all the orders. You can add or remove any order status before you run the job. See [Order Status](#) for the various order status.

Configure the merchant email address

For FraudSight notification to function correctly, you must designate an email address that will receive fraud notifications. To set this address, do the following:

1. Go to *Merchant Tools/Site Preferences/Custom Site Preference Groups/ Worldpay-AdditionalFeatures*

Notify Fraud Sight Order Mail To Address

 (String)

Notify Fraud Sight Order Mail From Address

 (String)

Worldpay documentation

Follow the link for information on FraudSight:

<https://developer.worldpay.com/docs/wpg/fraudsightglobal/fraudsightprotect/>

Issuer Insights

Issuer Insights is our powerful tool that provides a window into issuers' information and performance. You can use this knowledge to identify trends and patterns specific to customers, and ultimately boost your approval rates

The issuer insights information is stored into order level attributes. The below order level attributes capture enhanced authorization responses:

- Prepaid Card Type
- Source Type

- Card Product Type
- Issuer Country
- Affluence
- Virtual Account Number
- Reloadable
- Account Range ID
- Available Balance

Worldpay will enable this feature – contact us if you want to use it.

Configurations:

To configure the attributes:

1. Go to *Site/Merchant Tool/Ordering/Orders*.

Issuer Insights

Prepaid Card Type:	<input type="text"/>
Source Type:	<input type="text"/>
Card Product Type:	<input type="text"/>
Issuer Country:	<input type="text"/>
Affluence:	<input type="text"/>
Virtual Account Number:	<input type="text"/>
Reloadable:	<input type="text"/>
Account Range ID:	<input type="text"/>
Available Balance:	<input type="text"/>

[<< Back to List](#)

2. The order level attributes populate once you run the *OrderNotificationUpdatesJob*.
3. To run this job, go to *Administration/Operations/Jobs*.
4. Click *OrderNotificationUpdatesJob* then **Run Now**.

Administration / Operations / Jobs /

Worldpay documentation

Follow the link for information on Issuer Insights:

<https://developer.worldpay.com/docs/wpg/usdomesticacquiring/issuerinsights>

Extended response codes

By default, Worldpay uses a set of standard response codes in order notifications. These codes indicate the status of a card payment.

If extended response codes are activated on your merchant code(s), you will receive enriched decline reasons. These enriched decline reasons give more insights into the reason for a transaction not going through.

By leveraging this extra information, you can customize the error messages displayed to your shoppers when their transaction is declined.

You can configure the error messages in Business Manager. These configurable messages appear to the shopper once you enable the feature in Site Preferences.

Site preferences

To enable extended response codes:

1. Go to *Site/Merchant Tool/Site Preferences/Custom Preferences/ Worldpay-AdditionalFeatures*.
2. Set the *Enable Overriding Checkout Error Messages* preference value to **Yes**. (See screenshot below.)

Enable Overriding Checkout Error Messages

EnableCustomExtendedResponseMessages

Yes

No

Custom objects

You can configure error messages for specific codes in the custom object called *EnableCustomExtendedResponseMessages*. To do this:

1. Go to *Site/Merchant Tool/ Custom Objects /Custom Object Editor*.
2. Select the Custom Object *EnableCustomExtendedResponseMessages*.
3. Click the **New** button and configure the error message for the error code required.

Merchant Tools > Custom Objects > Custom Objects

Manage Custom Objects

This page allows you to manage custom objects based on your object type definitions.

Use the object type select box below to choose the object type definition for which you want to search custom objects. Use the object ID search field to further limit your search to objects with certain key values.

Click New to create new custom object instances for the selected object type. Click Delete to delete the selected custom object instances.

Custom Object Search

Object Type: Object ID: Simple Advanced

Please select an object type (and provide an optional search phrase) and click Find.

Merchant Tools > Custom Objects > Custom Objects > New Custom Object

Configuration of Error Messages

Error Code:*

Error Message:

The shopper's experience

When the Extended Response Codes feature is enabled error messages that you have configured appear in the checkout flow.

The screenshot shows a checkout process on the Salesforce Commerce Cloud platform. At the top, there is a blue header bar with the word "Checkout". Below it, the Salesforce commerce cloud logo is visible. A red error message box contains the text: "Invalid request, please choose a different Payment Method or try again later." To the right, there is an "Order Summary" section and a detailed "Shipping" and "Payment" section.

Troubleshooting:

To review extended declines for transactions that have been processed you can use the Worldpay DART files or login to Pazien. If you do not have access to these, please contact your Worldpay Relationship Manager or Customer Support.

For error codes not related to extended declines, see the troubleshooting section in the Worldpay API guide. If you continue to have issues, contact your Worldpay Relationship Manager or Customer Support.

Statement narrative

The feature enables statement narratives for all the supported APMs (like Google Pay, PayPal, SEPA, Klarna, IDEAL ACH Pay, etc) except for the credit card payment method.

The statement narrative is a text. Shoppers can use it to enter the purpose of the transaction in the payment details section. This text is included in the authorization request as part of the payload.

Site preferences

In Business Manager, configurations are available to enable/disable this feature. Follow the steps below to enable Statement Narratives:

1. Go to *Merchant Tools/Site Preferences/Custom Site Preference Groups/ Worldpay-AdditionalFeatures*

Name	Value	Default Value
Enable Statement Narrative (EnableStatementNarrative)	Yes	No

The shopper's experience

The statement narrative text area appears in the checkout flow when statement narrative feature is enabled.

The shopper can enter the purpose of the transaction. This feature is applicable for both guests and logged-in users.

The screenshot shows a PayPal checkout interface. At the top, there is a "Phone Number" field containing "9879879879". Below it is a "Purpose of transaction" field containing "Birthday Special". To the right of the "Purpose of transaction" field is a blue tooltip box with the following text:

Purpose of transaction will reflect on your statement, only if it is supported by the selected payment method and will be validated by the payment method before processing. Please adhere to the Statement Narrative guidelines of the selected payment method before entering the Purpose of transaction.

At the bottom of the screen is a blue button labeled "Next:Place Order".

CSC: full, multiple capture and partial capture

This feature enables merchant to do multiple partial capture from Customer Service Centre (CSC).

Configurations

You must grant the Customer Service Centre (CSC) permission to do multiple partial captures.

To do this, you need to change the Admin Configuration. Do the following:

1. Go to *Administration/ Organization/Roles & Permissions*.
2. Click *Administrator*.
3. Click the *Customer Service Center Permissions* tab and give permission to the Site(s).

The screenshot shows the Salesforce Admin interface with the following details:

- Sandbox - zzkv MobileFirst** is selected in the top left.
- The top navigation bar includes: Merchant Tools, Administration, Storefront, Toolkit, and a user profile for himanshu singhrajput.
- The main menu tabs are: General, Users, Business Manager Modules, Functional Permissions, WebDAV Permissions, Locale Permissions, Price Adjustment Limits, and Customer Service Center Permissions (which is highlighted).
- The current page is titled "Administrator - Customer Service Center Permissions".
- A note at the top states: "This list shows all Customer Service Center permissions which can be granted. Click Select Context to specify for which context you'd like to modify permissions. Available context options are the organization, one site, or multiple sites."
- Instructions below the note: "Select the checkboxes and use the Update button at the bottom of the page to grant permissions. Deselect the checkboxes and use the Update button to revoke permissions."
- A note about multiple contexts: "When multiple contexts are selected with different permissions, you can view detailed information by clicking in the 'Detail' column."
- The main content area displays a table for "Customer Service Center Module : Module Description". It lists three items:

Module	Description	Selected
Order		<input checked="" type="checkbox"/>
Multiple Partial Capture	Multiple Partial Capture	<input checked="" type="checkbox"/>
Void sale	Void sale	<input checked="" type="checkbox"/>
- Buttons at the bottom right: "Reset" and "Update".
- A link at the bottom left: "<< Back to List".

4. Go to *Administration/Site Development/System Object Types/Order - Attribute Groups/custom*.
5. Create the following system object types if not present already - *wpgPartialSettleAmount*, and *wpgSettleReference*.

<input type="checkbox"/>	wpgPartialSettleAmount	Partial Settle Amount	String
<input type="checkbox"/>	wpgSettleReference	WPG Settle Reference	Set of Strings

< Back

End user interaction (CSC agent) flow

When you enter a value and click *Partial Settle Order* after validation you get a success message.

Below is the table listing the CSC actions applicable for various payment methods orders.

Payment Method	Cancel	Partial Capture	Full Capture	Partial refund	Full Refund	Void
Credit/Debit Card /HPP	Yes	Yes	Yes	Yes	Yes	No
Paypal	Yes	Yes	Yes	Yes	Yes	No
Apple Pay	Yes	Yes	Yes	Yes	Yes	No
Google Pay	Yes	Yes	Yes	Yes	Yes	No
Alipay/Alipay Mobile	Yes	No	No	Yes	Yes	No
Poli AU	Yes	No	Yes	Yes	Yes	No
IDEAL	Yes	No	Yes	Yes	Yes	No
Klarna Pay Now	Yes	No	Yes	No	Yes	No
Klarna Pay Later	Yes	No	Yes	No	Yes	No
Klarna Slice It	Yes	No	Yes	No	Yes	No
ACH Pay	Yes	No	No	Yes	Yes	Yes
Wechat Pay	Yes	No	Yes	No	No	No
Konbini	Yes	No	Yes	No	No	No
Sepa	Yes	No	No	No	No	No
China Union Pay	Yes	No	Yes	Yes	Yes	No
Giropay	Yes	No	Yes	No	No	No
Sofort	Yes	No	Yes	Yes	Yes	No
PRZELEWY24	Yes	No	Yes	Yes	Yes	No
Mistercash	Yes	No	Yes	No	No	No

For **Klarna** orders, during full capture operations, the customer service agent has to enter one or more tracking IDs separated by “,” in the Capture page.

Below you can see the end user interaction during full capture.

If you run the *OrderInquiriesUpdateJob*, the job picks up the latest order status after capturing.

End user interaction (CSC agent) flow (full capture)

After validation the success screen below is displayed:

End user interaction (CSC agent) flow: Klarna

The CSC agent can enter multiple tracking IDs (alphanumeric) separated by a comma “,”

Worldpay documentation:

Follow the link for information on partial and multiple captures:

<https://developer.worldpay.com/docs/wpg/manage/modificationrequests#capture>

There are several tabs in the screen above. See the table for a description of these tabs:

Tab	Description
General	Provides the general information about the ID and description of the job.
Schedule and History	<ul style="list-style-type: none"> Shows if the job schedule is enabled or not. If enabled, it shows the frequency of the schedule
	<ul style="list-style-type: none"> Shows the job-run history such as execution scope, status (success or failure), start and end time, duration, and a link to download the log file
Resources	Enables you to specify system or custom resources to be locked by the job so that other jobs will not modify them.
Job Steps	Shows the logical tasks involved in the overall job.
Failure Handling	Enables you to specify what your job does if it fails. For example, continue as scheduled, retry or stop-on-error.

Notification

- Gives you the option to enable or disable notifications
- Enables you to select the events (success, failure, retry, long running) you want to receive notification about
- From, To, CC and BCC sections to provide notification contacts

Multi merchant support

The multi merchant support feature enables you to use different Worldpay merchant codes across several sites or across different channels or payment methods. Note that only one of the methods (by site, channel or payment method) is supported at a time.

To enable this feature in Business Manager:

1. Go to *Merchant Tools/Site Preferences/Custom Preferences/Worldpay-MultiMerchant*.
2. Enable the *enableMultiMerchantSupport* preference.

Name	Value	Default Value
Enable Merchant Support (enableMultiMerchantSupport)	No Global toggle for Multi Merchant Support	

By site

The Multi Merchant by Site feature allows you to configure different merchant codes by sites.

Site preference

Do the following:

1. Go to *Merchant Tools/Site Preferences/Custom Preferences/Worldpay-MultiMerchant*.
2. Select the *multiMerchantType* as *Based on Site*.

Custom object

1. As shown in the screenshots below, in Business Manager, select a site and go to *Merchant Tools/Custom Objects/Custom Object Editor*.
2. In the *Custom Object Search* panel, select *MultiMerchantBySite* from the *ObjectType* dropdown.
3. Click **Find** and select *MobileFirst*.
4. Enter your merchant ID, username and password.

[Merchant Tools](#) > [Custom Objects](#) > [Custom Objects](#) > MobileFirst - General

General

Manage 'MobileFirst' (MultiMerchantBySite)

Fields with a red asterisk (*) are mandatory. You can view and edit the name and description in other languages, if required. Click **Apply** to save the details.

Config	
 SiteID:*	<input type="text" value="MobileFirst"/>
Merchant ID:	<input type="text" value="SAPIENTNITROECOM"/>
XML User Name:	<input type="text" value="XU5UIXKPP30S30WTY3FP"/>
XML Password:	<input type="password" value="....."/> Confirm XML Password: <input type="password" value="....."/>

[**<< Back to List**](#)

Service credential changes

1. As shown in the screenshot below, in Business Manager go to *Administration/Operations/Services*.
2. Click the *Credentials* tab.
3. Enter your merchant name, URL, username and password.

[Administration](#) > [Operations](#) > [Services](#) > [Service Credentials](#) > SAPIENTNITROECOM - Details

SAPIENTNITROECOM

Fields with a red asterisk (*) are mandatory. Click **Apply** to save the details. Click **Reset** to revert to the last saved state.

These credentials are used by 1 service.

Name:	SAPIENTNITROECOM
URL:	https://secure-test.worldpay.com/jsp/merchant/xml/paymentService
User:	XU5UIXKPP30S30WTY3FP
Password:

[**<< Back to List**](#)

Troubleshooting checklist

1. Ensure that the service configurations for the new merchant ID are correct in the *Credentials* tab.
2. Make sure you have entered your Merchant ID in *Custom Preferences*.
3. If *MultiMerchant* is enabled, check that the custom object *MultiMerchantBySite* has credentials for your merchant ID.
4. In *Notifications*, make sure the checkboxes for events and URL are updated in the **Merchant Administration Interface**.

By channel

The multi merchant by channel feature enables you to configure different merchant codes by channel.

Site preference

1. Select the *multiMerchantType* as *Based on Channel*.
2. Select the list of supported channels, as shown below:

Name	Value	Default Value
Enable Merchant Support (enableMultiMerchantSupport) Global toggle for Multi Merchant Support	None	Edit Across Sites
Type of Multi Merchant (multiMerchantType)	Based on Channel (channel)	Based on Site Edit Across Sites
Multi Merchant Channel List (multiMerchantChannelList)	Name Default (Default) Desktop (MultiMerchantChannelDesktop) Mobile (MultiMerchantChannelMobile) IPad (MultiMerchantChannelIPad) CSC (MultiMerchantChannelCSC)	Default Edit Across Sites

Custom object

Create and configure merchant credentials for the channels in the custom object called *MultiMerchantByChannel*, as shown below. To do this:

1. Go to *Merchant Tools/Custom Objects/Custom Object Editor*.
2. Select *Custom Object (MultiMerchantByChannel)*.
3. Click the **New** button and configure the merchant credentials.

Click New to create new custom object instances for the selected object type. Click Delete to delete the selected custom object instances.

Custom Object Search				
Object Type:	<input type="text" value="MultiMerchantByChannel"/>	Object ID:	<input type="text"/>	<input type="button" value="Find"/>
<input checked="" type="checkbox"/> Select All <input type="checkbox"/> Channel Name (Name) <input type="checkbox"/> Scope <input type="checkbox"/> Last Modified <input type="checkbox"/> Expires On				
	<input type="checkbox"/> Desktop	Site	9/10/20 5:39:11 am	
	<input type="checkbox"/> Default	Site	8/12/20 2:08:10 am	
	<input type="checkbox"/> Mobile	Site	9/29/20 3:33:58 am	
	<input type="checkbox"/> iPad	Site	9/4/20 7:50:06 am	
	<input type="checkbox"/> CSC	Site	8/12/20 1:07:26 am	

Manage 'Desktop' (MultiMerchantByChannel)

Fields with a red asterisk (*) are mandatory. You can view and edit the name and description in other languages, if required. Click **Apply** to save the details.

Config

Channel Name:*	<input type="text" value="Desktop"/>		
Merchant ID:	<input type="text" value="SAPIENTNITROECOM"/>		
Google Pay Merchant ID:	<input type="text" value="6220450070379490"/>		
Worldpay Merchant Number:	<input type="text" value="100038056"/>		
XML User Name:	<input type="text" value="XU_E3LJXKFI30530WIVY31P"/>		
XML Password:	<input type="password" value="....."/>	Confirm XML Password:	<input type="password" value="....."/>

Adding and removing channels

You can add new channels and remove existing channels within Business Manager. To do this:

1. Go to *Administration/Site Development/System Object Types/Site Preferences - Attribute Definitions*.
2. Select *MultiMerchantChannelList* then add the new channel.

Search Attribute Value Definitions

Value or Display Value:	Display Value	Default	Sorting
<input type="checkbox"/> Default	Default	<input checked="" type="radio"/>	<input type="button" value="Up"/>
<input type="checkbox"/> MultiMerchantChannelDesktop	Desktop	<input type="radio"/>	<input type="button" value="Down"/>
<input type="checkbox"/> MultiMerchantChannelMobile	Mobile	<input type="radio"/>	<input type="button" value="Up"/>
<input type="checkbox"/> MultiMerchantChannelPad	iPad	<input type="radio"/>	<input type="button" value="Down"/>
<input type="checkbox"/> MultiMerchantChannelCSC	CSC	<input type="radio"/>	<input type="button" value="Up"/>
New Value: <input type="text" value="MultiMerchantChannelTablet"/>	Tablet	<input type="radio"/>	<input type="button" value="Down"/>

3. To add a new channel, provide the channel name (e.g., tablet) as the display name and the corresponding implementation JS file as the Value, as shown below.
4. After you add the new channel click the **Apply** button.
5. You can remove existing channels by selecting the channel from the list and clicking the **Delete** button.

By payment method

The Multi Merchant by Payment Method feature allows you to configure different Merchant codes by payment method.

Site preference

1. Select the *multiMerchantType* as *Based on Payment Method*.

Name	Value	Default Value
Enable Merchant Support (enableMultiMerchantSupport) Global toggle for Multi Merchant Support	Yes	Global toggle for Multi Merchant Support
Type of Multi Merchant (multiMerchantType)	Based on Payment Method (paymentMethod)	Based on Site

Custom object

You can use a custom object called *MultiMerchantByPaymentMethod* to configure merchant code credentials for each payment method as follows:

1. Go to *Merchant Tools/Custom Objects/Custom Object Editor*.
2. Select the custom object *MultiMerchantByPaymentMethod*.
3. Click the **New** button and configure Merchant Credentials for each payment method.

[Merchant Tools](#) > [Custom Objects](#) > [Custom Objects](#)

Manage Custom Objects

This page allows you to manage custom objects based on your object type definitions.

Use the object type select box below to choose the object type definition for which you want to search custom objects. Use the object ID search field to further limit your search to objects with certain key values.

Click **New** to create new custom object instances for the selected object type. Click **Delete** to delete the selected custom object instances.

Custom Object Search		Simple	Advanced

Country spoofing

Country spoofing is a function that enables shoppers to use payment methods that would be unavailable in some countries. It also enables payments in country codes that are not registered with Worldpay. These unregistered codes are linked to another country code that allows payments to be taken. Examples are in the setup below. Country spoofing does not change anything else about the transaction.

For example, imagine a specific territory such as the Isle of Man is a billing country not supported by Worldpay. In this situation, only default payment methods are accepted, such as credit cards and debit cards. The currency of the Isle of Man is the pound sterling, the same as the UK. Country spoofing enables you to include the Isle of Man with the UK. Once done, UK-supported APMs appear to Isle of Man shoppers. Both the UK and the Isle of Man use the same currency, so order placement and payment processing are straightforward.

You must ask your Worldpay Implementation Manager to enable country code spoofing on your account.

Site preference

1. Go to *Merchant Tools/Site Preferences/Custom Preferences/Worldpay-AdditionalFeatures*.
2. Update two site preferences: country spoofing (`countryspoofing`) and list of spoofed country (`listofspoofedcountry`).
3. Make sure the list of spoofed countries is in the correct format: e.g if you are spoofing Jersey (JE) with the United States (US), format it as JE:US.

You can see this in the screenshot below: The country Isle of Man is spoofed with United Kingdom (GB) and

the country Jersey is spoofed with United States.

Configurable labels and alerts

This feature gives you the flexibility to configure the values for labels and alerts in Business Manager. This works if you `EnableConfigurableLabels` in custom preferences, then labels and alerts will pick value from Business Manager.

Site preference changes

1. Go to *Merchant Tools/Site Preferences/Custom Preferences/Worldpay-AdditionalFeatures*.

Custom object changes

Once you have enabled configurable labels and alerts in custom preferences, you can configure labels and alerts through custom object (*ConfiguredLabels*). Every element of this custom object is in the form of a key value pair as it is present in the resource bundle.

To configure labels and alerts, do the following:

1. Go to *Merchant Tools/Custom Objects/Custom Object Editor*.

Custom Object Search			Simple	Advanced
Object Type:	ConfiguredLabels	Object ID:	Find	
Select All	(labelName)	Scope	Last Modified	Expires On
<input type="checkbox"/>	field.customer.email	Site	8/17/20 12:15:27 am	
<input type="checkbox"/>	label.input.creditcard.owner	Site	8/17/20 12:07:44 am	
<input type="checkbox"/>	tooltip.bank	Site	8/17/20 12:41:26 am	
<input type="checkbox"/>	worldpay.payment.type.selectedmethod	Site	8/17/20 12:45:47 am	
<input type="checkbox"/>	tooltip.expirationMonth	Site	8/17/20 12:52:42 am	
<input type="checkbox"/>	worldpay.or	Site	8/17/20 12:55:37 am	
<input type="checkbox"/>	worldpay.disclaimer.modaloptionno	Site	8/17/20 12:56:30 am	
<input type="checkbox"/>	msg.card.type.ending	Site	8/17/20 1:31:36 am	
<input type="checkbox"/>	info.phone.number	Site	8/17/20 1:36:36 am	
<input type="checkbox"/>	page.heading.payments	Site	8/18/20 4:02:27 am	
<input type="checkbox"/>	msg.no.saved.payments	Site	8/18/20 8:47:22 am	
<input type="checkbox"/>	worldpay.ach.selectaccount	Site	8/17/20 1:05:26 am	
<input type="checkbox"/>	label.klarnaPaymentMethod	Site	8/17/20 12:43:54 am	
<input type="checkbox"/>	worldpay.payment.amount	Site	8/17/20 12:48:45 am	
<input type="checkbox"/>	tooltip.cardOwner	Site	8/17/20 12:50:56 am	
<input type="checkbox"/>	tooltip.cardNumber	Site	8/17/20 12:51:48 am	
<input type="checkbox"/>	worldpay.disclaimer.link	Site	8/17/20 1:07:22 am	

2. The default value, that is the value from resource bundle (the properties file in codebase), is picked under the following conditions:
 - If `EnableConfigurableLabels` is not enabled

- If we have not added the key value pair in our custom object
- The key is present in our custom object but the value is empty

The shopper's experience

Configurable Labels (When not configured)

A screenshot of a Salesforce Commerce Cloud payment page in a Safari browser. The page is titled "Payment". It includes fields for "Billing Address" (set to "Rahul Dravid 3333 N Texas St Fairfield, CA 94533-9715"), "Phone Number" (2345678901), "Name on card" (empty), "Card Number" (empty), "Expiration Month" (month dropdown), "Expiration Year" (year dropdown), "Security Code" (empty), and a "Save Card to Account" checkbox. A "Disclaimer" link is also present. At the bottom, there are "Back to saved payments" and "Next: Review Order" buttons.

Configurable labels (When configured appended “test” to all labels’ end as an example value)

A screenshot of the same Salesforce Commerce Cloud payment page as above, but with all labels appended with "Test". The modified labels include "Payment Test", "Billing Address Test", "Phone Number Test", "Name on card Test", "Card Number Test", "Expiration Month Test", "Expiration Year Test", and "Security Code Test". The rest of the page content remains the same, including the "Save Card to Account" checkbox and the "Back to saved payments" and "Next: Review Order" buttons.

Configurable alerts (When not configured)

The screenshot shows a Salesforce payment interface. At the top right, there is a summary table:

Each	Quantity	Total
\$99.00	1	\$73.99

The main form contains several input fields with validation errors:

- *Phone Number**: "2345678901" (No error message)
- *Name on card**: "dummy" (No error message)
- *Card Number**: "1234 5362" (Error message: "Sorry your credit card number is wrong")
- *Expiration Month**: "01" (Error message: "Sorry your credit card is expired")
- *Expiration Year**: "2021" (Error message: "Sorry your credit card is expired")
- *Security Code**: "12" (Error message: "Please enter valid CVV number")

At the bottom, there is a "Back to saved payments" button.

Configurable alerts when configured (appended “test” to all labels’ end as an example value)

This screenshot shows the same payment interface as the previous one, but with the labels for the error messages ending in "test".

- *Phone Number Test**: "2345678901" (No error message)
- *Name on card Test**: "dummy" (No error message)
- *Card Number Test**: "1234 434" (Error message: "Sorry your credit card number is wrong Test")
- *Expiration Month Test**: "01" (Error message: "Sorry your credit card is expired Test")
- *Expiration Year Test**: "2021" (Error message: "Sorry your credit card is expired Test")
- *Security Code Test**: "12" (Error message: "Please enter valid CVV number Test")

Troubleshooting

If you are having trouble finding labels/alerts try the following:

1. Disable *EnableConfigurableLabels*.
2. Get the default value from storefront.
3. Search the default value under the advanced section of the custom object editor. To do this, in Business Manager go to *Merchant Tools/Custom Objects/Custom Object Editor | Advanced*).

The screenshot shows the 'Custom Object Search' interface in Salesforce. The 'Object Type' is set to 'ConfiguredLabels'. The search criteria are set to find records where 'Label Value (custom.labelValue)' equals 'Email'. The results table shows one item: 'field.customer_email'. The table includes columns for 'labelName', 'Scope', 'Last Modified', and 'Expires On'. At the bottom, there are buttons for 'Edit All' and 'Edit Selected'.

Limitations

You can only configure labels and alerts if your validation is done in backend processing and not through a regular expression present in the xml file (SFCC OOTB).

The configurable labels and alerts are currently available only in payment form and the *new card addition* popup in the *My Account* page.

Intelligent account verification (IAV)

Intelligent Account Verification (IAV) is a feature that validates a credit card for its authenticity.

How it works

When a shopper saves a card in the wallet from the *My Account* page, a zero or nominal value (a payment request with a value greater than zero) authorization request is sent to Worldpay. Based on the outcome, the card is either saved or discarded. Any transaction above 0 value is automatically reversed

There are two positive outcomes:

1. A successful zero authorization returns a status of AUTHORISED as normal.
2. A successful nominal authorization is automatically reversed, which produces a 'positive' CANCELLED status.

Site preferences

The nominal value field holds the amount, which the merchant can set for the IAV call. A non-zero nominalValue (usually <=2 GBP or the equivalent in other currencies), is considered for an auto reversal of the transaction.

To enable IAV, do the following:

1. Go to *Merchant Tools/Site Preferences/Custom Preferences/Worldpay-SecureTransaction*
2. Enable *Worldpay-SecureTransaction*.

Nominal Value	<input type="text" value="1.0"/>	Edit Across Sites
(nominalValue) (Number)

Order inquiry batch job Narrative Line1

The `OrderInquiryUpdatesJob` is a batch job that you can run manually or schedule at specific intervals - every two or five minutes.

The job consists of a four-stage process:

1. Pick all orders with *Created*, *New* and *Open* status that also have a *Not Paid* payment status.
2. The job then iterates through the orders and makes order-inquiry service calls for each order.
3. It then updates the orders' statuses in Business Manager (*Order Status/Payment Status/Confirmation Status*).
4. Finally, it updates the token details in the order, and for the customer's card.

The screenshot shows the Salesforce Jobs interface for the `OrderInquiriesUpdateJob`. The top navigation bar includes links for Sandbox - zzkv, MobileFirst, Merchant Tools, Administration, Storefront, and Toolkit. Below the navigation is a search bar and a breadcrumb trail: Administration / Operations / Jobs / OrderInquiriesUpdateJob. The main page displays the `OrderInquiriesUpdateJob` configuration with tabs for General, Schedule and History, Resources, Job Steps, Failure Handling, and Notification. The General tab is selected, showing the ID as `OrderInquiriesUpdateJob`. The Description field contains the text: "Batch job for fetching order inquiries of Worldpay Orders with payment status= not paid and order status CREATED, NEW OR OPEN and updating Order Statuses and token details in order and customer saved payment instruments". The Priority section shows a radio button for Normal selected. At the bottom of the page, there are buttons for Save, Cancel, and Run.

The screenshot below shows you the job interface:

Job-failure email notifications

If a failure is reported in an order notification, the system can send an email to the shopper.

EnableJobMailerService	No	Edit Across Sites
(EnableJobMailerService)		
EnableJobMailerService		
© 2020 salesforce.com, Inc. All Rights Reserved.	MobileFirst Time Zone: Coordinated Universal Time Instance Time Zone: Eastern Daylight Time Version: 20.7 Last Updated: Jun 22, 2020 (Compatibility Mode: 19.10)

To enable this job, do the following:

1. Go to *Administration/Operations/Jobs* and click *OrderNotificationUpdatesJob*.
2. Click the **Schedule and History** tab.
3. Click the checkbox to enable the job.
4. Select the **Notifications** tab.
5. Click on the checkbox to enable the email notification for the job.

The next step is to select the site, go to *Merchant Tools/Site Preferences/Custom Preferences* and select **Yes** from the dropdown for *EnableJobMailerService*. You can see this in the screenshot below, along with the site preferences you must set.

EnableJobMailerService	<input checked="" type="checkbox"/>
NotifyJobMailCC	admin@worldpay.com
NotifyJobMailFrom	admin@worldpay.com
NotifyJobMailTo	admin@worldpay.com

Initiate the cancel order job

The job cancels or refunds all failed orders that have the Worldpay *MAC Missing* attribute.

NOTE: In some cases the Message Authentication Code (MAC) missing attribute is true. This occurs in a credit card response URL redirect when there has been a MAC error due to authentication failure. The same thing happens to an APM response URL redirect. See the [Client Side Encryption](#) guide for more details.

To set a schedule for running the job, and the time interval for selecting orders, go to Business Manager: *Administration/Operations/Jobs* and click `InitiateCancelOrderJobs`. Click the *Schedule* and *History* tab and schedule the time interval for running the job.

The job will also trigger an email, sent to your chosen recipients. The email has a list of orders that have failed because of a Worldpay Mac Missing status. The screenshot below shows you the control section for this job in Business Manager:

Administration / Operations / Job Schedules /

InitiateCancelOrderJobs

General	Schedule and History	Resources	Step Configurator	Notification	Failure Handling
ID*	<input type="text" value="InitiateCancelOrderJobs"/>				
Description	<input type="text" value="Initiate a Call to worldpay to cancel an order."/>				
Priority	<input checked="" type="radio"/> Normal <input type="radio"/> High				

The screenshot below shows the functions and configuration settings for the job:

Pay By Link fail order job

The job fetches all Pay By Link orders that are not paid and fails all the orders that have crossed expiry life time. The order is failed and inventory is restored. If the *resendEmailAfterExpired* option is turned on then an email is sent to undo the fail order and block the inventory so that customer can proceed with payment and order can get confirmed.

Country currency mapping

Countries are mapped against the following currencies:

Country	Currency
USA	US dollar
United Kingdom	Pound sterling
Germany	Euro
France	Euro
Belgium	Euro
Italy	Euro
Sweden	Swedish krona
Canada	Canadian dollar
Australia	Australian dollar
China	Yuan Renminbi
Japan	Japanese yen

Russian Federation	Russian ruble

Managing the customer service center

To manage the customer service center, the Business Manager administrator should do the following:

1. Go to *Administration/Organization/Roles/Administrator* – Customer Service Center Permissions. This is enabled for CSC users.
2. Select the context of your site and click **Apply**:

Customizing the look and feel of redirect pages

To customize the look and feel of redirect pages:

1. Log in to Business Manager and select the site you want to configure.
2. Go to *Preferences/Custom Preferences/Worldpay* and input your preferences in the fields shown below:

NOTE: Ensure you add the payment method ID that needs to be supported to the Worldpay Configurable Hosted Payment Page APM site preference. If you are not sure of the values you need to add, contact your Worldpay Relationship Manager (RM) or contact Worldpay Support. An alternative is to see the [configuration instructions in the Merchant Admin Interface guide](#).

Customizing iframe or lightbox HPP redirect pages

With hosted payment pages, you can specify the color and mask opacity and of the iframe or lightbox. To do this:

1. Log in to Business Manager and go to *Merchant Tools/Ordering/Payment Methods*.
2. Select the Credit Card *Redirect* payment method:

WorldPay	Credit Card - Redirect
YANDEXMONEY-SSL	Yandex
WorldPay Details	
User Name:	<input type="text"/>
Type:*	<input type="text" value="REDIRECT (Redirect)"/> <input type="button" value="▼"/>
Password:	<input type="password"/> Confirm: <input type="password"/>
Days after which Order expires:	<input type="text"/> (Number)
SEPA Mandate Number:	<input type="text"/>
Worldpay Statement Narrative:	<input type="text"/>
HPP CustomOptions JSON:	<pre>{ "type": "iframe", "lightboxMaskOpacity": 50, "lightboxMaskColor": "#000000", "debug": false }</pre> <p>HTML Editor</p>

3. In the HPP *CustomOptions* JSON field, you can specify the color and mask opacity by customizing the following code:

```
{
  "type": "iframe"
}

OR

{
  "type": "lightbox",
  "lightboxMaskOpacity": 50,
  "lightboxMaskColor": "#000000",
  "debug": false
}
```

Checkout theme (optional cartridge)

The optional SFRA cartridge *worldpay_sfra_changes* aims to provide an enhanced shopper experience in the payment page of the checkout journey.

The SFRA OOTB design with minor customization appears below:

KLARNA SLICE IT	KLARNA PAYLATER	KLARNA PAYNOW
ACH Pay		
微信支付 WeChat Pay	Google Pay	Credit Card - Redirect
<p>*Phone Number</p> <input type="text" value="9879879879"/>		
<p>*Name on Card</p> <input type="text"/>		
<p>*Card Number</p> <input type="text"/>		
<p>*Expiration Month</p> <input type="text" value="month"/>	<p>*Expiration Year</p> <input type="text" value="year"/>	
<p>*Security Code</p> <input type="text"/>		

The new optional cartridge added in the *Site* cartridge path will give you the new design.

<p>Billing Address</p> <input type="text" value="Joe Bloggs, 196 Hunter Street, London, NW1 6AA"/> ▼													
<p>Update Address > Add new Address ></p>													
<p>Select Payment Method</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 5px;"><input type="radio"/> Pay by Credit Card</td> <td style="text-align: center; padding: 5px;"></td> <td style="text-align: center; padding: 5px;"></td> <td style="text-align: center; padding: 5px;"></td> </tr> <tr> <td style="padding: 5px;"><input type="radio"/> Pay by Wallet</td> <td style="text-align: center; padding: 5px;"></td> <td style="text-align: center; padding: 5px;"></td> <td></td> </tr> <tr> <td style="padding: 5px;"><input type="radio"/> Pay by Alternative Payment</td> <td style="text-align: center; padding: 5px;"></td> <td style="text-align: center; padding: 5px;"></td> <td style="text-align: center; padding: 5px;"></td> </tr> </table>		<input type="radio"/> Pay by Credit Card				<input type="radio"/> Pay by Wallet				<input type="radio"/> Pay by Alternative Payment

Place secure payment			

<input checked="" type="checkbox"/> Pay by Wallet			
<input type="radio"/> Pay by Alternative Payment			
Buy with Apple Pay Buy with Google Pay			

*Please note: Once you select the selected wallet payment button below - your payment will be taken

You can leverage this new cartridge and provide an enriched UI experience to the shoppers. Import the cartridge in Business Manager in the same way as any other cartridge.

The key differentiator is the classification of available payment methods into three categories:

- Pay by Credit card - Shopper can pay using any credit card
- Pay by Wallet - Shopper can pay by any wallets such as Google Pay and Apple Pay
- Pay by Alternative Payment – Shopper can pay with multiple alternative payment options based on selected country

There is no change to existing implementation of registered and guest user payment flow.

Visual features

Here are some of the notable features of the themes:

- As part of the new design, a secure lock icon with the text *Secure Checkout* has been placed near the page heading, and also by the *Payments* heading
- The *Place order* button text has been changed to *Place secure payment*
- The credit card name is pre-populated from billing address/shipping address

- There is added functionality to show tooltips with CVN/CCV number placement against the security code field
- Several captions have text such as *Card type is known by first digit entry automatically, 3 or 4 digits on the back of the card*, and *Please note: Once you select the place secure payment button below - your credit card payment will be taken*
- The VISA, MasterCard and Amex card logos appear next to the credit card section heading
- The Google Pay, Apple Pay, etc logos appear next to the *Pay-by-Wallet* heading, this is dynamic and is based on the actual payment method available
- The Alternative Payment Methods (APM) icons appear next to the *Pay-by-Alternative-Payment*. Due to space constraints only first three available icons appear based on actual payment methods available. No images appear if you do not set APM images in the Business Manager.
- New images are also added to static/default/images folder to support new UI changes

Technical features

- The *checkout.isml* file is overwritten in our new *worldpay_sfra_changes* cartridge. Instead, we include complied js and css files needed for the updated UI design
- ADA issues in the wave tool have been addressed as part of the new design. We have changed the primary and secondary button color to address the ADA color contrast issue
- The new design is responsive and has a dedicated tablet and mobile view
- The build suit must be altered to access this cartridge when a new build occurs
- Label hiding – Form labels are visually hidden, and a placeholder added

Failure alerts

This feature aims to send email notification to merchant account and to the Worldpay whenever a failure occurs in the order process (authorize, authenticate, any violation).

Toggle has been provided to facilitate merchant to enable or disable the feature.

How it works

- The email sent to Merchant contain details of the error that occurred along with the order id
- MERCHANTS have the ability to enable/disable the mails sent to Worldpay.

Placeholder for WP email Id: default email id has been set

notifyErrorWPEmailId : support@worldpay.com

Worldpay Notification Error update for Failed Orders

To: Shruti Patil

Cc: Shruti Patil

Merchant Code : SAPIENTNITROECOM
Order Alerts : 00000914
Failure reason : Authorization failed

Managing content assets

All imported assets are in the site import folder (metadata) in the cartridge installation pack.

NOTE: Ensure that content assets in the import have the appropriate library ID of the XML import site.

To manage content assets, go to *Merchant Tools/Content/Content Asset*. Ensure that assets with the IDs *worldpayhelper*, *saveCardDisclaimer* and *worldpay-elv-consent* are added.

Managing your Worldpay Service profile

To manage your Worldpay profile, go to *Administration/Operations/Services* and click the associated credentials of the service:

The screenshot shows the 'Services' section of the Salesforce Administration/Operations/Services interface. A single service entry is listed:

Select All	Name	Type	Profile	Credentials	Status
<input type="checkbox"/>	int_worldpay.http.worldpay.payment.post	HTTP	worldpayprofile	SAPIENTNITROECOM	Live

Configuration information is in the table:

Profile	Description
Name	The Worldpay merchant ID that Worldpay supplies.
URL	The web service URL that is invoked when calling the Worldpay service.
User	The username associated with the merchant ID.
Password	The password associated with the merchant ID.

Administration > Operations > Services > SAPIENTNITROECOM - Details

SAPIENTNITROECOM

Fields with a red asterisk (*) are mandatory. Click Apply to save the details. Click Reset to revert to the last saved state.
These credentials are used by 1 service.

Name: [*]	SAPIENTNITROECOM
URL:	https://secure-test.worldpay.com/jsp/merchant/xml/paymentS
User:	XU5UIXKPP30S30WTY3FP
Password:	*****

Production set-up

To set up the production service in Business Manager:

1. Go to *Administration/Operations/Services*.
2. Click **Credentials**.
3. Create new credentials by inputting the merchant code, production service URL, username and password that Worldpay has sent you.
4. Now go to *Merchant Tools/Site Preferences /Custom Preferences*.
5. Inside the Worldpay group, input your merchant code in *Merchant Code for Worldpay* and update any other fields as needed:
 - *Worldpay Client Side Encryption Public Key* (only if you are using client-side encryption)
 - *Worldpay MAC Secret Code*
 - *Worldpay Merchant Number*

- *Worldpay Installation ID* (only if you are using hosted payment pages)
6. If you want to use a separate credentials at APM level, you can configure this at *Merchant Tools/Ordering/Payment Methods*.

Operations and maintenance

Data storage

Data-level attributes

A variety of attributes is defined and stored in the *Order* object. These are custom attributes and are sent as a part of Order XML. This enables the order management system to use the custom attributes for further processing.

Sr. No.	Additional Custom Fields	Attribute ID	Description
1	Refusal/decline code	declineCode	The result code of a declined transaction from the Worldpay response.
2	Risk score	riskScore	The overall risk score sent by Risk Management or Risk Guardian.
3	Authorization ID	authID	The value of the authorization ID for the authorization request.
4	Masked card number	cardNumber	The masked card number from Worldpay's response. First four and last four digits.
5	CVC Result Code	cvcResultCode	The CVV status code in the response.
6	AVS Result Code	avsResultCode	The Address Verification Service status code from the response.

7	AAV Postcode Result Code	aaVPostcodeResultCode	This field is populated from the authorization response to the AMEX card. Similar to AVS.
8	AAV Address Result Code	aaVAddressResultCode	This field will be populated from the authorization response to the AMEX card. Similar to AVS.
9	AAV Email Result Code	aaVEmailResultCode	The email result code for American Express only.
10	AAV Telephone Result Code	aaVTelephoneResultCode	The telephone result code for American Express only.
11	AAV Cardholder Name Result Code	aaVCardholderNameResultCode	The cardholder name result code for American Express only.
12	Transaction Status	transactionStatus	This field maintains the history of order status. It is an array, and whenever an order status is changed, the transaction status will be updated by an order notification.
13	Issuer Response	issuerResponse	The authentication response from the issuer after 3D verification.
14	SEPA Mandate ID	mandateID	The mandate ID created for a SEPA transaction.
15	Worldpay Last Event	WorldpayLastEvent	The last transaction status that occurred on a Worldpay order.
16	Worldpay MAC missing	worldpayMACMissingVal	True when a MAC error is received in a redirect credit card or APM response URL.

Order-payment instrument attributes

As well as capturing the order attributes, the system captures various order-payment instrument attributes. These are specific to the payment method and are captured in the <payment> tag.

Sr. No.	Additional Custom Fields	Description
1	Bank	For the iDEAL APM.
2	Installments	Installments (Coming Soon) NOTE: Please contact Worldpay for more information about the maximum number of instalments.
3	CPF	CPF
4	BankCode	Bank code (for IDEAL)
5	Worldpay Merchant ID	The merchant ID with which the order is placed (ALL).
6	Worldpay Token Requested	The token requested value where selected for cards (CREDIT CARDS).

Order notification custom object

The attributes for the custom Object OrderNotifyUpdates are defined in the table below. The system creates a new custom object every time a notification is received with all these attributes. The custom object is kept until the Notification Job deletes it.

Sr. No.	Additional Custom Fields	Description
1	Order No	orderNo
2	XML String	xmlString
3	Custom Object ID	ID
4	Time Stamp	timestamp

Availability

Please contact your Worldpay Relationship Manager (RM) or Worldpay Support for:

- The expected availability/uptime (in percentage) of services and interfaces
- Current information on the availability and reliability of services
- Information on any unplanned outage

Payment method restriction on Storefront and CSC for Multishipping

Payment Methods like CC Direct/HPP, PayPal, Apple Pay, Google Pay is supporting for Partial Capture hence, we are not restricting these payment methods in storefront and CSC and rest other payment methods are restricting in the storefront and CSC.
